## Installation

- Unzip the Albums-viewer.zip archive
- Launch Albums-viewer.exe and follow installation process
- Copy the folder « My albums » in the folder of your choice
- Copy the full path of this folder from the address bar (You will paste it in step « first launching »)

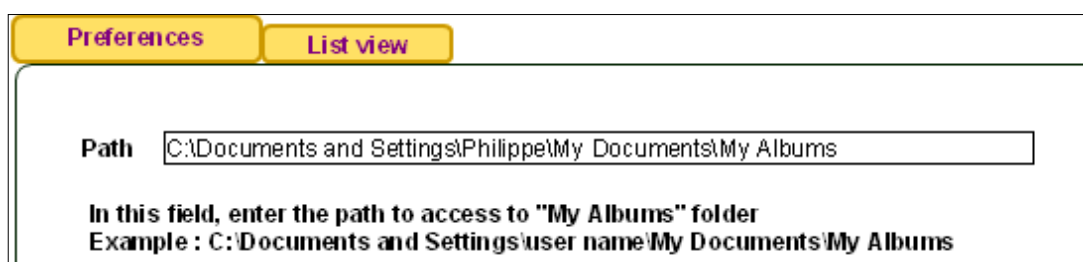

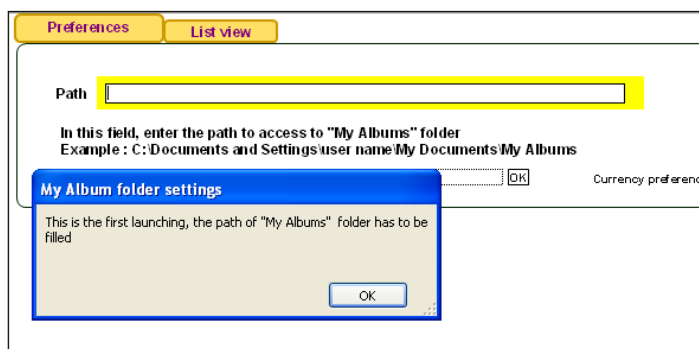

## Moving images folders

- In order to be able to import folders containing your photos, you have to drag these folders in « My Albums » folder.

## First launching

- Select « Albums-viewer » in start program or on your desktop
- Click on « Trial version » or enter your serial number
- Paste the path of folder « My Album » in this field

- Click now on List view

## Album-Viewer concept

This software is based on very simple and efficient concepts

- You can import as many images folders as you want in the database.
- It gives you the ability to sort these images in multiple subalbums and different themes like Family, Sport, Travels, etc
- All the albums or subalbums can be printed according different layouts
- Albums and subalbums can be directly exported to album files, ready to be published on the web
- All the images imported are linked to their original folder in « My Albums ». Removing images or folders will break the link
- Deleting records in albums or subalbums will not affect the images in original folder

## Albums import

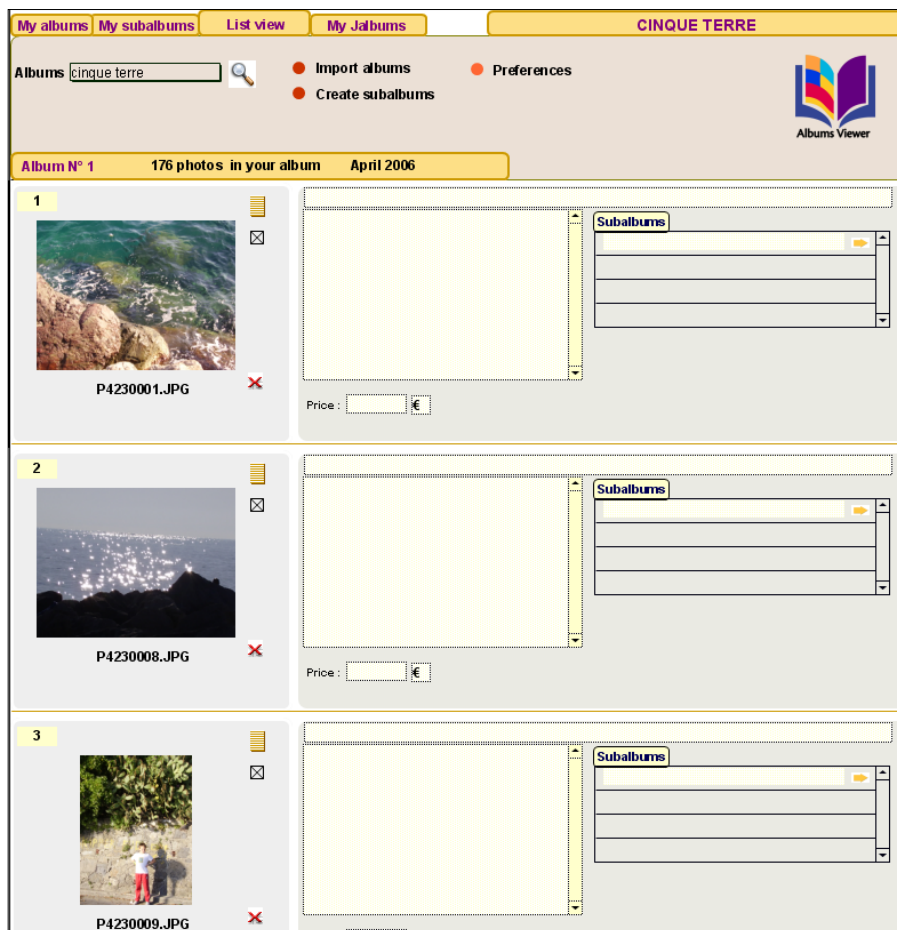

- Click on "Import albums"

- Type the name of the folder you want to import

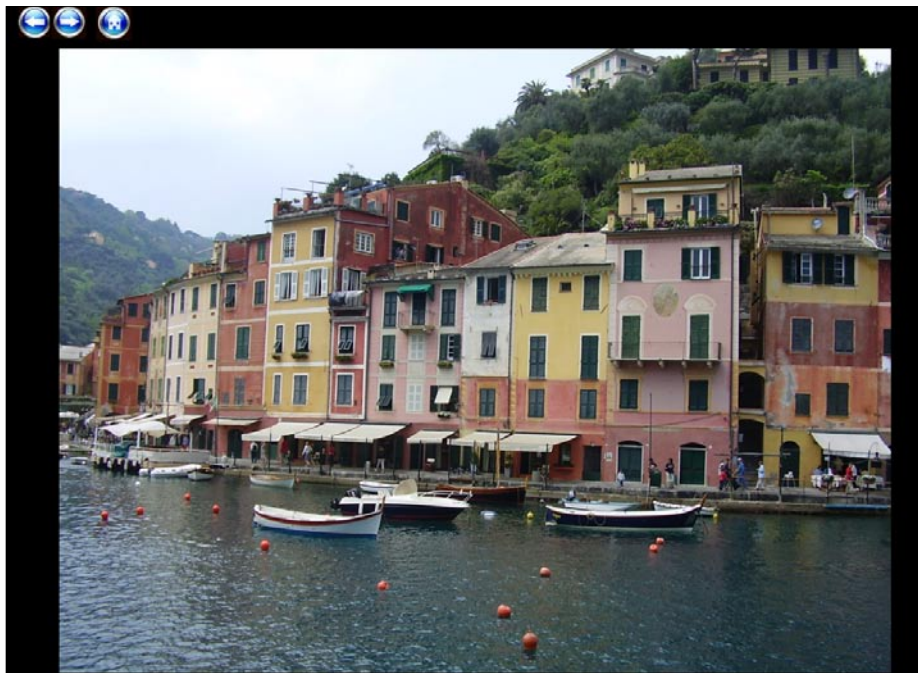

- Click on album folder icon to check the name of the folder you want to import.
- Select the date you want to associate to this folder
- Click on ok

- Photos of selected folder are imported and displayed in “List view”.

## Zoom view

- You can zoom on any photos by clicking on it

- Click on the home icon to display List view again

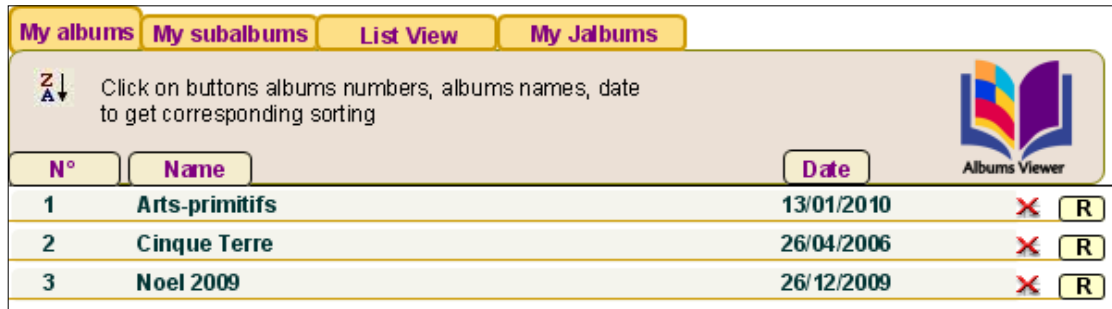

## Album selection

There are several ways to view your albums

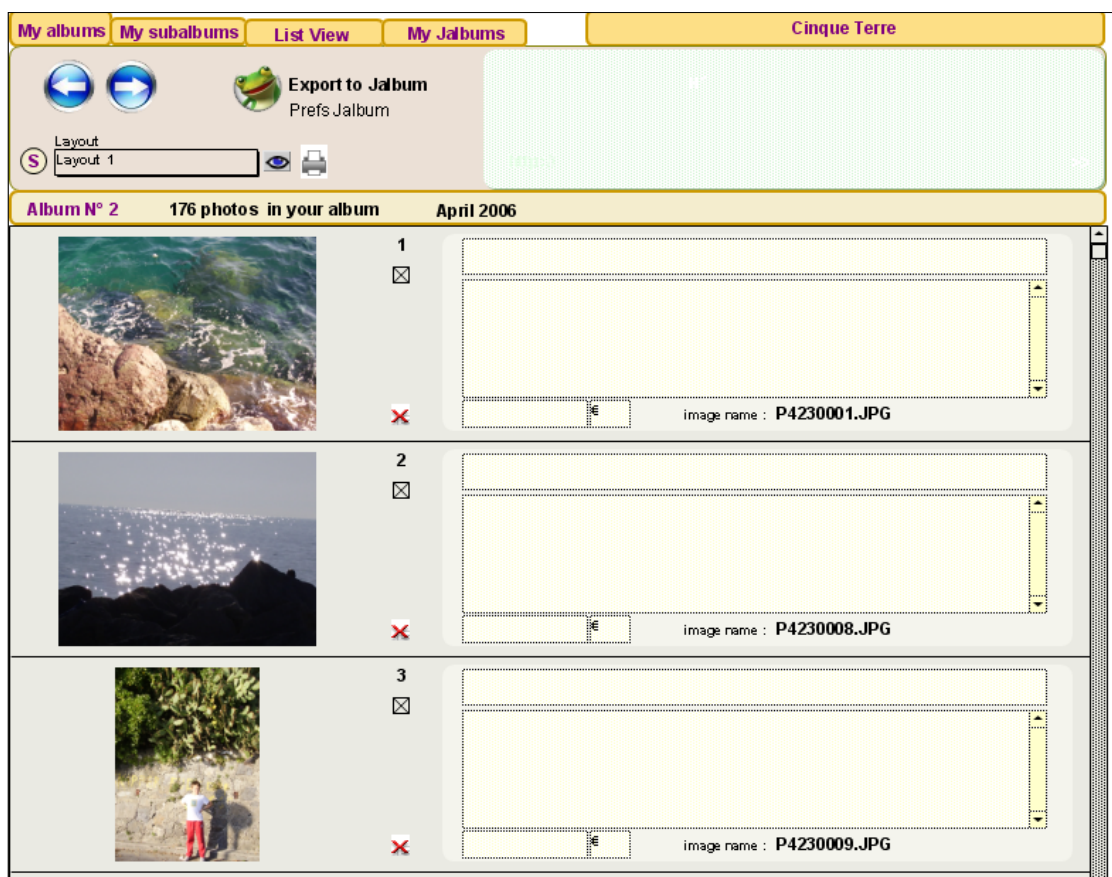

- 1) You can select albums with the album pop-up

- 2) you can also browse each album individually by selecting « My albums » tabs

- When clicking on album's name, it opens album contents

- With arrows buttons, you can browse through your albums

## Advanced search

- In List view, click on search icon
- type your search criteria and press enter key to perform search

Album N° 1      Date: January 2010

**Ritual figure - Bembe - RDC Zaire**

Description

Stature of ancestors, medium hard wood...

the opening on the back was used by the „nganga" to give vital force to the figure, afterwards it was filled with magical material: „bilongo" (medicine) or relics of an ancestor (hair, pieces of finger nails or bones) as a symbol of the power and spirit of the deceased relative. Afterwards the opening was closed by a piece of fabric or a plug. As long as the spirit stayed within the statue, it watched over his descendants and punished contempts against customs and rules.

Belonging to the so-called „cryptopower figures", a terminology introduced by William Fagg.

## Subalbums

Subalbum feature is a very easy way to group photos according specific criteria. Each photo can belong to one or several Subalbums.

ex : You want to group photos according specific criteria : Family, sport, travel, etc

### Create a Subalbum

- In list view, select "Create subalbums"
- Type a new subalbum name and click on ok

Family

New year's day

Sport

- For example, you can group in Selection Christmas 2009 the best photos of this event.
- You can access to subalbums by clicking on the ➡
- You can also display all subalbums by selecting «My subalbums» tabs.

**My albums** **My subalbums** **List View** **My Jalbums**

 Click on buttons albums numbers, albums names, date to get corresponding sorting

N°	Name	Date
1	Arts-primitifs	13/01/2010
2	Cinque Terre	01/04/2006
3	Christmas 2009	25/12/2009

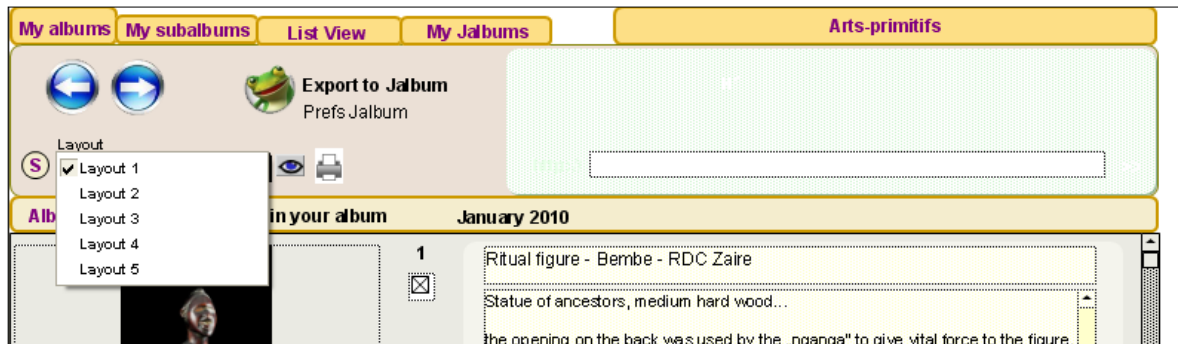

## Print photos from albums or subalbums

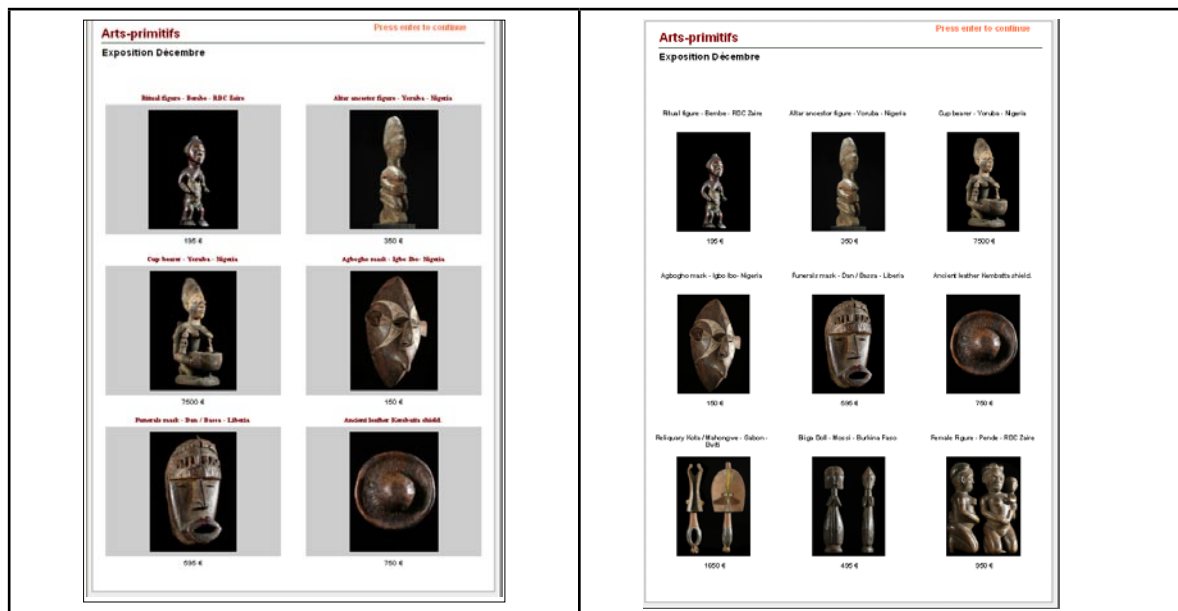

You can print photos from any albums or subalbums

### Previewing an album

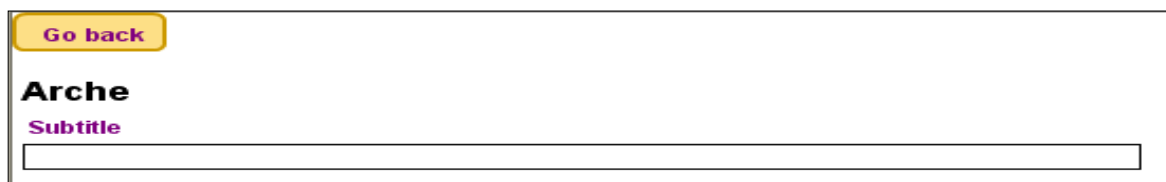

- Click on "My albums" tabs
- Select an album
- In layout pop-up, select a layout to preview objects (5 layouts are available)
- Click on  to display preview mode

- Preview mode is displayed
- Click on enter or «continue» button to exit Preview mode

- You can add a subtitle by clicking on the  beside layout pop-up

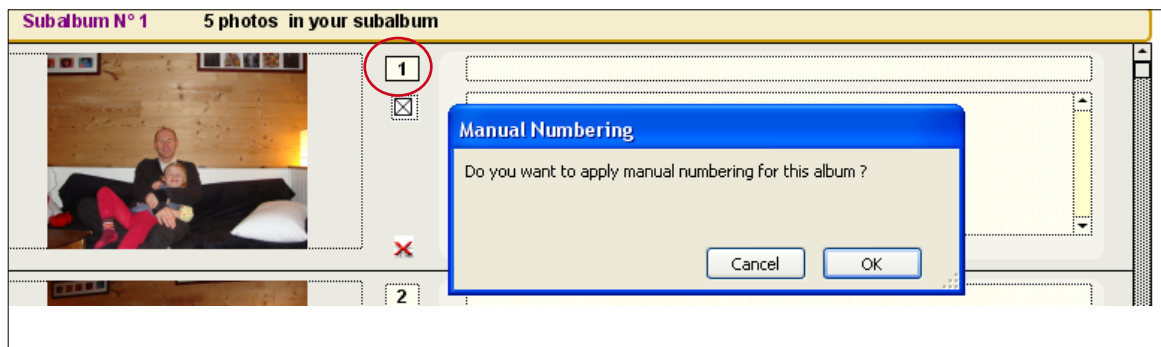

### Printing an album

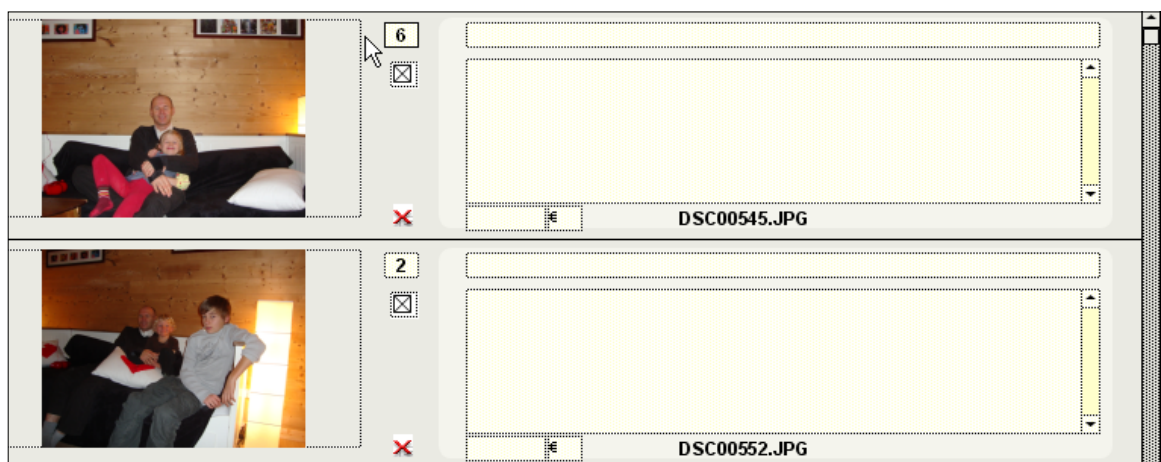

- Click on  to print after layout selection

### Arrange photos in a subalbum

- In Subalbums, photos are sorted in the order they have been selected. However, you can change this order to get manual numbering
- When clicking in the field number of a photo, a message is displayed asking you if you want to apply manual order.
- Now, you just have to change number and click on enter to reorder your subalbum.

- Type the new number and press on enter to reorder photos

- To get back to original sorting,
  - uncheck manual numbering checkbox
  - Click on "My subalbums" list
  - click on the subalbum you want to reorder

## Delete/Rename albums

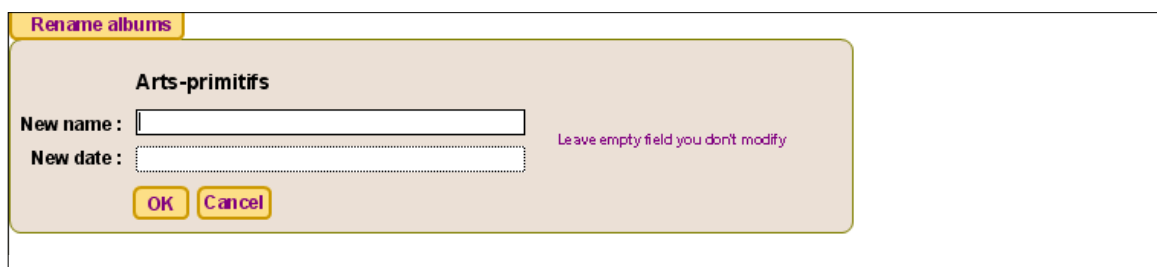

### Delete album

- Click on «My albums» list
- Click on  to delete an album

My albums My subalbums List View My Jalbums				
 Click on buttons albums numbers, albums names, date to get corresponding sorting				
N°	Name	Date		
1	Arts-primitifs	13/01/2010		
2	Cinque Terre	26/04/2006		
3	Christmas 2009	26/12/2009		
4	Arche	21/10/2009		

## Rename album

- Click on **R** to rename an album

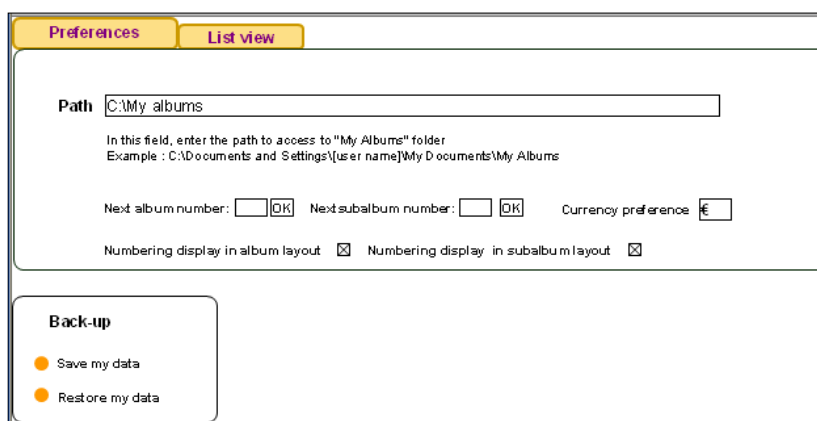

- Type the new data in the fields you want to modify and click on ok

## Delete/Rename subalbums

- From list view, do same operations as delete or rename albums.

## Preferences

In preferences, you can set

- path of folders « My albums » where are stored your photo folders
- next album or subalbum number: if you want to reset the number of next album imported
- currency used for prices
- When printing albums or subalbums , you can choose not to display numbers by unchecking “Numbering display in album layout” or “Numbering display in subalbum layout”

## Backup

- You can backup and restore your files
- This option is especially dedicated to import your data in new versions of Albums-viewer

# JALBUM bridge

In one click, you can generate your jalbum files !
