Overview

The .NET Framework 2.0 Service Pack 2 provides cumulative roll-up updates for customer reported issues found after the release of the .NET Framework 2.0. In addition, this release provides performance improvements, and prerequisite feature support for the .NET Framework 3.5 Service Pack 1.

Please review the supported operating systems for this deployment package in the System Requirements section. The corresponding updates for Windows Vista and Microsoft Windows 2008 are deployed via the full .NET Framework 3.5 service pack 1.

[Top of page](#)

System Requirements

- Supported Operating Systems:** Windows Server 2003; Windows XP
- Processor:** 400 MHz Pentium processor or equivalent (Minimum); 1GHz Pentium processor or equivalent (Recommended)
- RAM:** 96 MB (Minimum); 256 MB (Recommended)

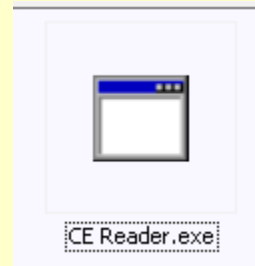

Then, you have to download its SP2: *Microsoft .NET Framework 2.0 Service Pack 2*. The URL is: <http://www.microsoft.com/downloads/details.aspx?FamilyID=5b2c0358-915b-4eb5-9b1d-10e506da9d0f&DisplayLang=en>

Tip: *Microsoft .NET Framework 2.0 and SP2* are extremely important for new kind of software. CE strongly recommends you to save them in your flash drive and portable hard disk. You do not have to access the Internet and download them repeatedly, if you use other computers. Many computers have not yet installed them by default.

After installation of the *Microsoft .NET Framework 2.0 SP2* platform, you can unpack the .zip file and open the folder. It has two editions: *USB* and *Installation*.

The USB edition does not require installation at all. You can simply double-click **CE Reader.exe** to run this software. It does not write data into Windows Registry or hard disk at all. It just runs on the memory temporarily. Besides, after closing the software, it will be totally removed from your computer.

It supports 32 and 64 bit systems at the same time.

It does not contain icons. Therefore, it uses the default icon of *Windows* operating system. Indeed, it looks ugly. You should complain about Microsoft Corporation. Note that it is not virus. You should not mistake it later. You should save it in your flash drive or portable hard disk.

The USB edition is quite useful if you use other people's computers. It is impolite to install software in computers of your friends. Similarly, you may not be allowed to install any software in office or other public computers, because these computers have been locked. You can still use this software if you use the USB edition. Definitely, to use this software, you have to persuade the owners to install the *Microsoft .NET Framework 2.0 SP2* platform first.

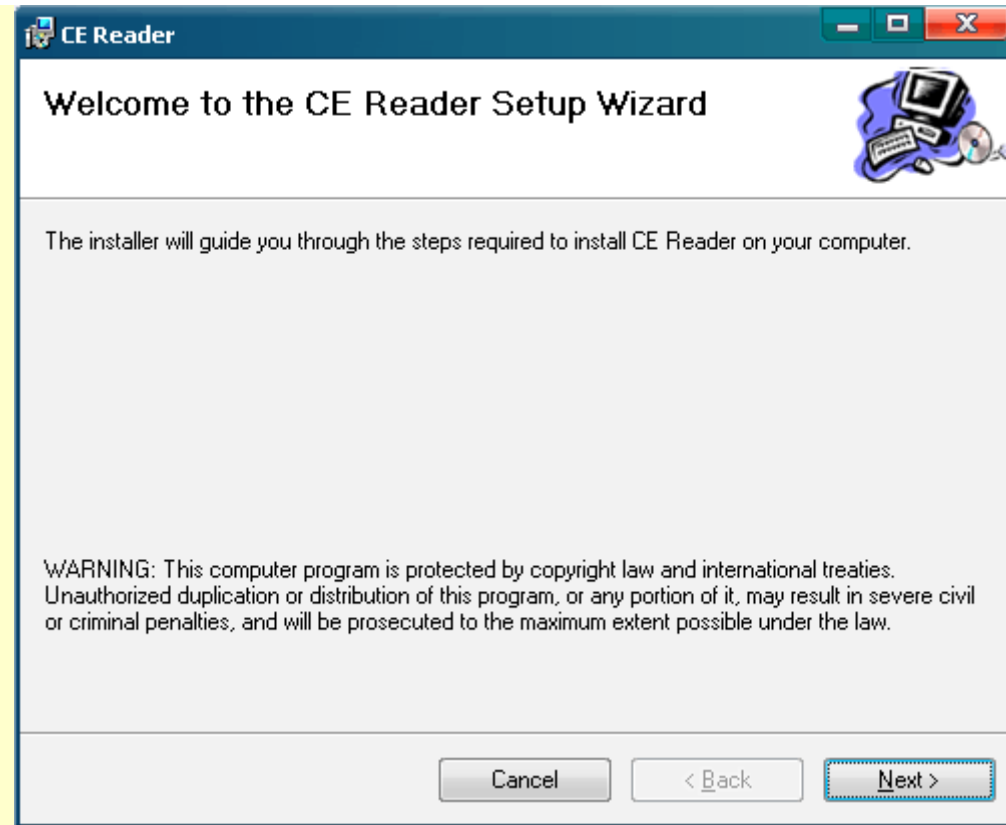

Definitely, you can install the software directly, if you are using your own computer.

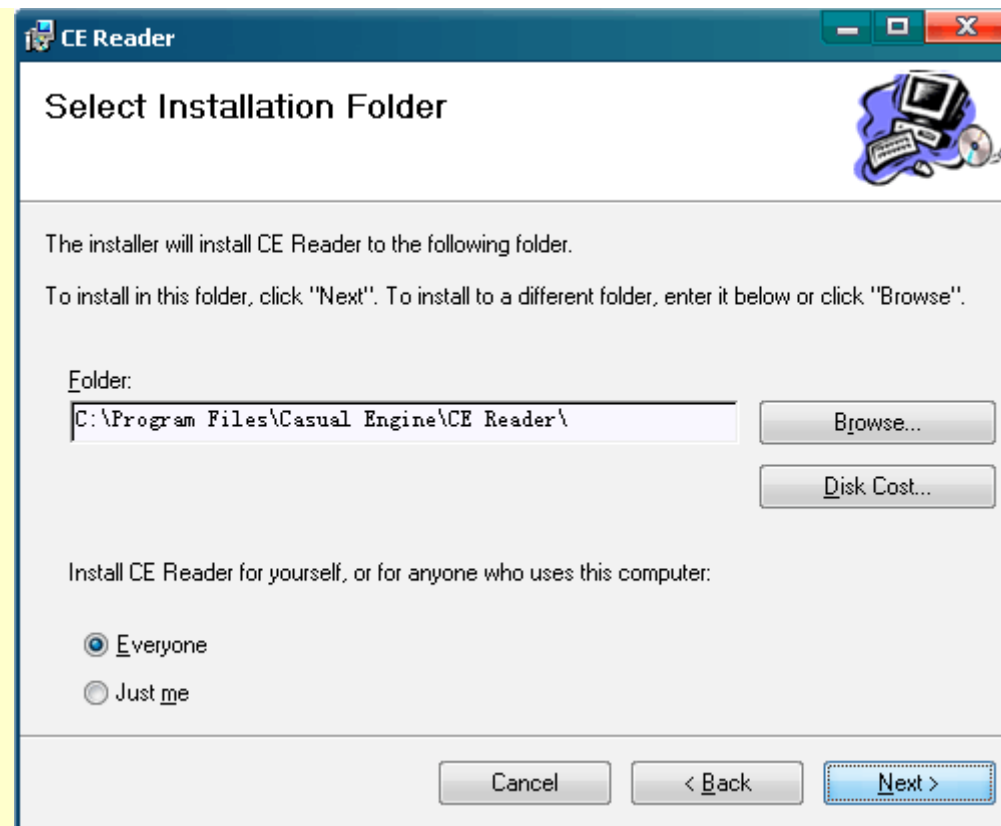

Then, you have to choose the system first. x86 means 32 bit while x64 means 64 bit.

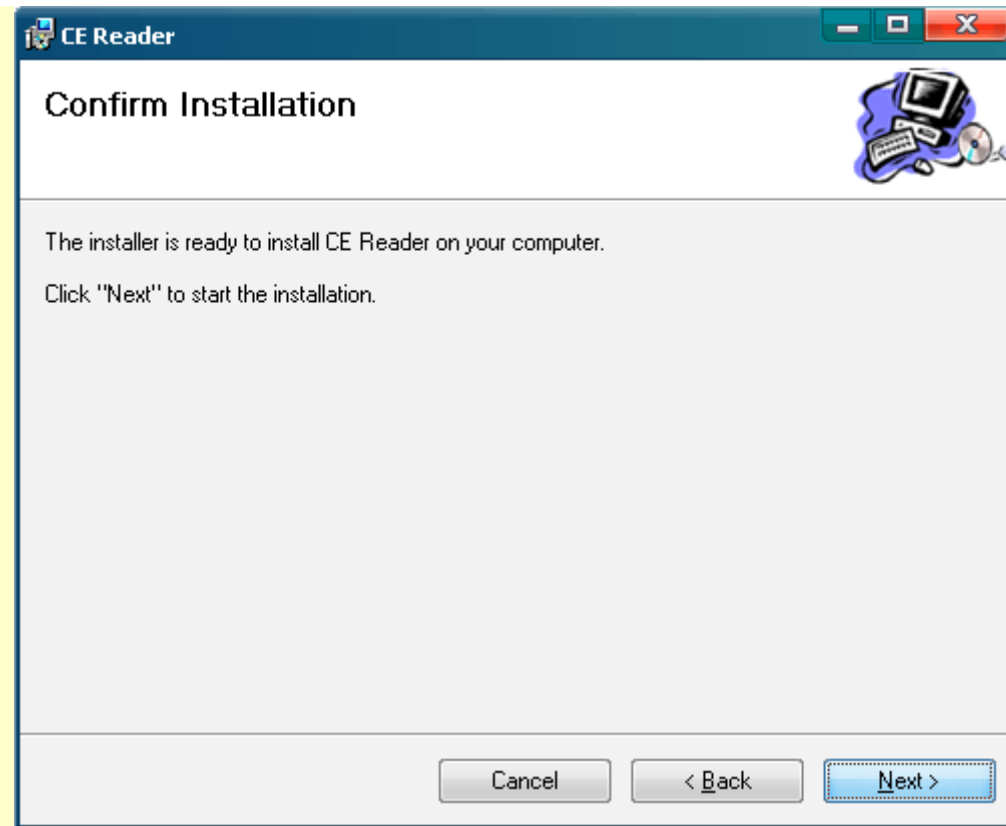

For example, you can double-click **Setup86.msi** to install it if your computer is 32 bit.

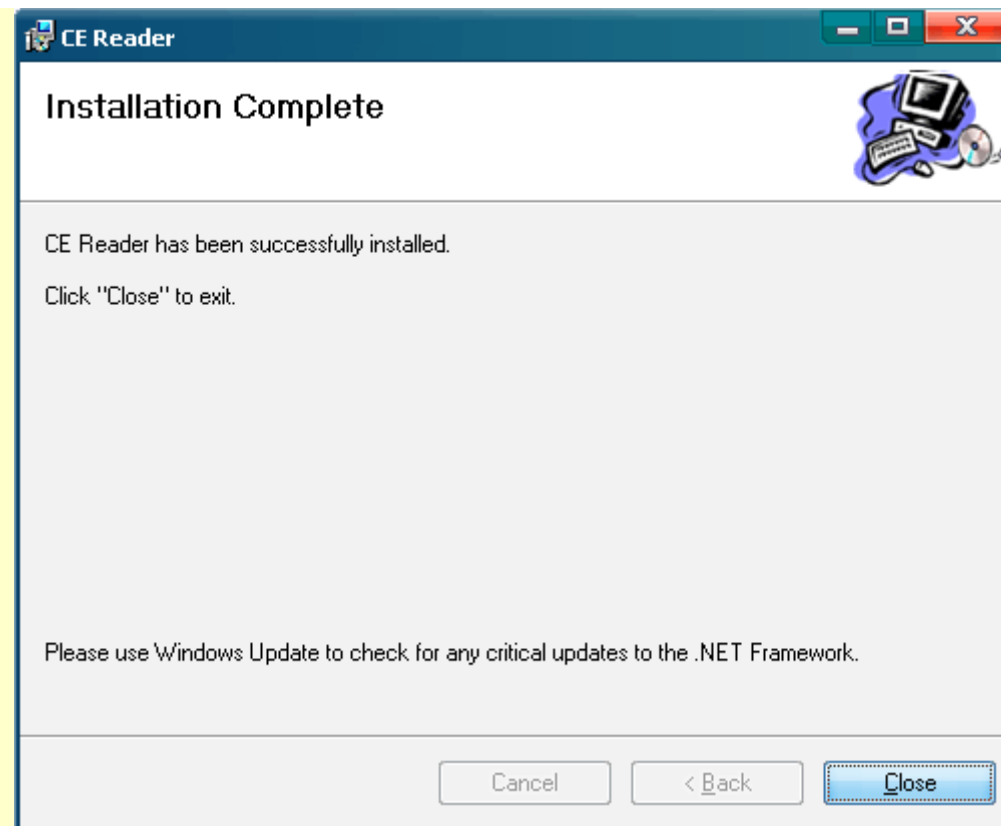

This is the wizard of installation. Click "Next" button.

Usually, you do not have to change the folder. Besides, everyone can use it by default. Click "Next" button again.

Finally, you can click "Next" button to start installation.

After installation, you can close this wizard. It has been installed in your computer successfully. You can start the software on [Start] menu.

Preface

Windows WordPad and *Windows Notepad* can directly edit the .rtf and .txt files. You can easily change the contents and cannot change them back. For example, you may mistakenly press some keys on your keyboard, and change the contents. Then, you are used to press **<Ctrl+Z>** key to undo.

Unfortunately, the **<S>** key lives nearby the **<Z>** key. At this moment, you can mistakenly press **<Ctrl+S>** key to save it to hard disk. Then, you will never change the contents back for the rest of your life.

Alternatively, you cannot undo by press **<Ctrl+Z>** key every time. To protect the memory, operating system cannot record many revising steps. It limits the times of undo. Otherwise, your memory has to store much data, and may cause the collapse of the operating system.

Overview

View, print and copy Word documents, even if you don't have Word installed. This download is a replacement for Word Viewer 2003 and all previous Word Viewer versions.

The Word Viewer, together with the [Microsoft Office Compatibility Pack for Word, Excel, and PowerPoint 2007 File Formats](#), allows you open Word documents saved in the following formats:

- Word Document (*.docx)
- Word Macro-Enabled Document (*.docm)
- Rich Text Format (.rtf)

You may think that you can use *Microsoft Word Viewer*. It can read .rtf and .txt files, except for .doc and .docx files. However, the file size of this software is quite large. You have to spend much time downloading it. Besides, it lacks of some features.

Adobe Reader can prevent changing the contents of PDF files. Similarly, CE Reader™ can prevent changing the contents of RTF and TXT files. CE Reader™ is a professional reader software, just like *Adobe Reader*.

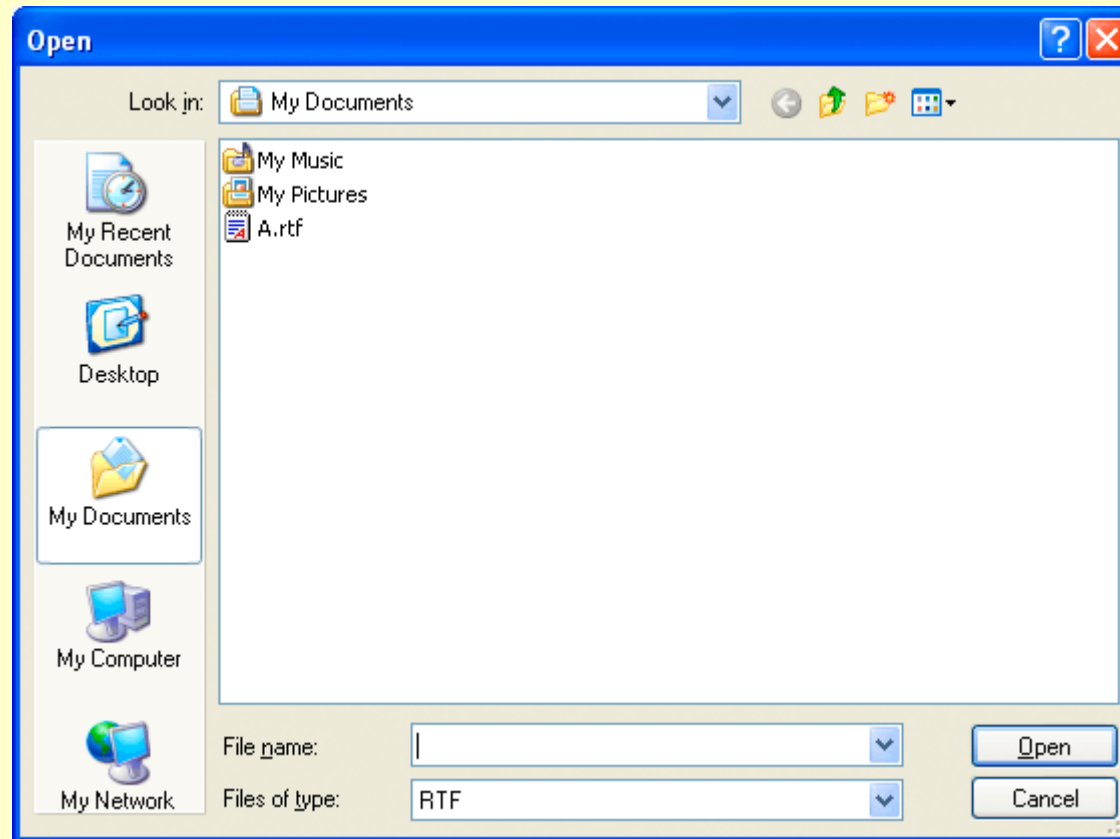

CE Reader™ cannot read .doc, .docx or odt files. However, you can use *Microsoft Word* or *OpenOffice* to save the files as .txt or .rtf files. Then, use CE Reader™ to open them.

Vitality, it can be used as an enhanced tool of CE Pad™.

Tip: CE Pad™ is a professional text editor. It is shareware. It can promote the accuracy and

efficiency of online and desktop editing. It contains the powerful snapshot function inside. You can try it before buying.

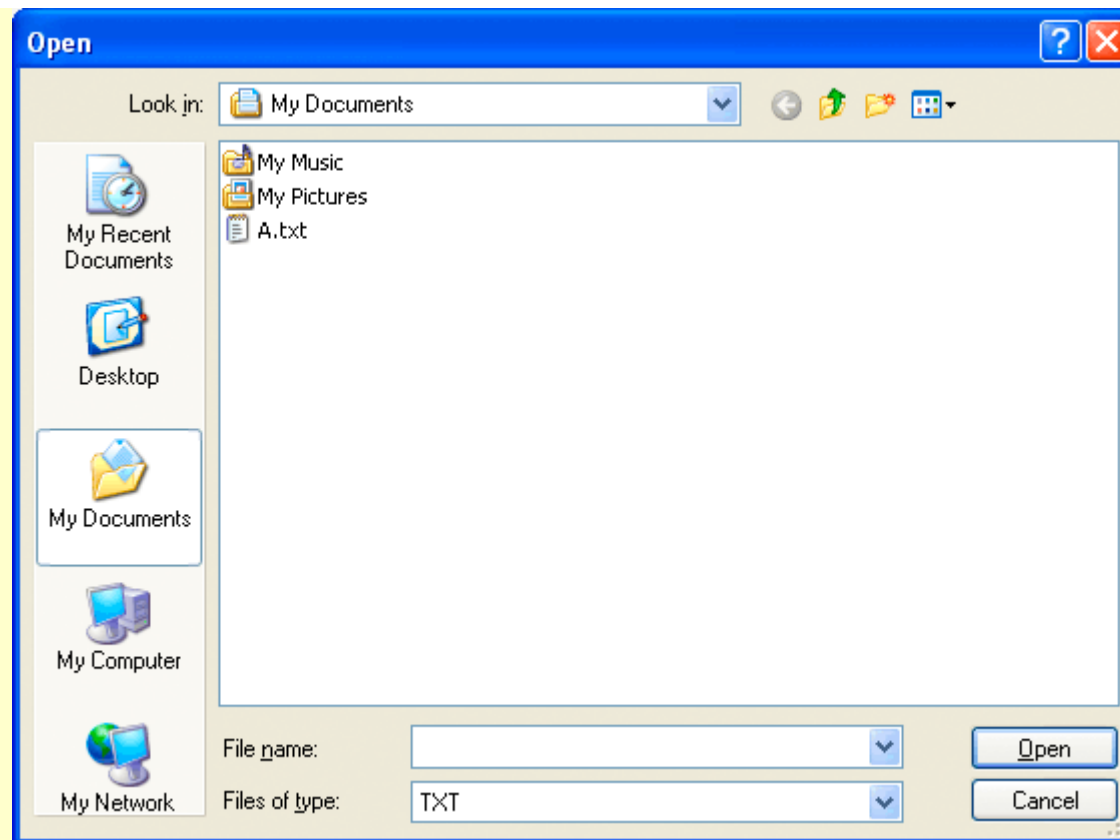

Open File

Unlike other reading software, it does not have any button, menu or complex settings. You can only use shortcut keys to control this software. Besides, the size of window is fixed. You cannot change its size.

To open .rtf files, you can press **<Ctrl+O>** key or double-click the background. This is the default file format of CE Reader™. Then, double-click the RTF file.

Tip: You do not have to close the window if you need to open other files. You can simply press **<Ctrl+O>** key again, it will read another file for you. New content will replace old one directly.

Definitely, you can open .txt files. You just need to press **<Ctrl+T>** key. Then, double-click the .txt files.

You can press **<Ctrl+M>** key to minimize the window.

You cannot open several files in the same window. CE Reader™ cannot mix several files together. However, it supports multiple windows. You can start many windows on [Start] menu, and open different files in different windows.

Overview

The Rich Text Format (RTF) Specification provides a format for text and graphics interchange that can be used with different output devices, operating environments, and operating systems. Version 1.9.1 of the specification contains the latest updates introduced by Microsoft Office Word 2007. RTF uses the American National Standards Institute (ANSI), PC-8, Macintosh, or IBM PC character set to control the representation and formatting of a document, both on the screen and in print. With the RTF specification, documents created under different operating systems and with different software applications can be transferred between those operating systems and applications.

```

The new version supports XML files. You can press **<Ctrl+Q>** key to open XML files. Meanwhile, you can press **<Alt+W>** key to disable word wrap, so that you can see the XML tags more clearly.

Note: It does not just support .xml files. It also supports .xsd, .xsl, .xslt, .xsx, .csproj, .csproj.user, .manifest, .rexs, and .settings files.

Web

A screenshot of a Notepad window titled "49990 K:\E\Word\Search\Google Advanced Search.htm". The window displays the HTML source code of a Google Advanced Search page. The code includes a DOCTYPE declaration, a comment about saving from a URL, and various HTML tags and CSS styles. The CSS styles include colors for the body, table, and links, as well as padding and border settings for table elements.

Similarly, you can press **<Ctrl+W>** key to open Web pages. It can read the source code of Web pages.

Note: It does not just supports .htm files. It also supports .js, .php, .aspx, .asp, .jsp, .css, and .axd files.

Background Color

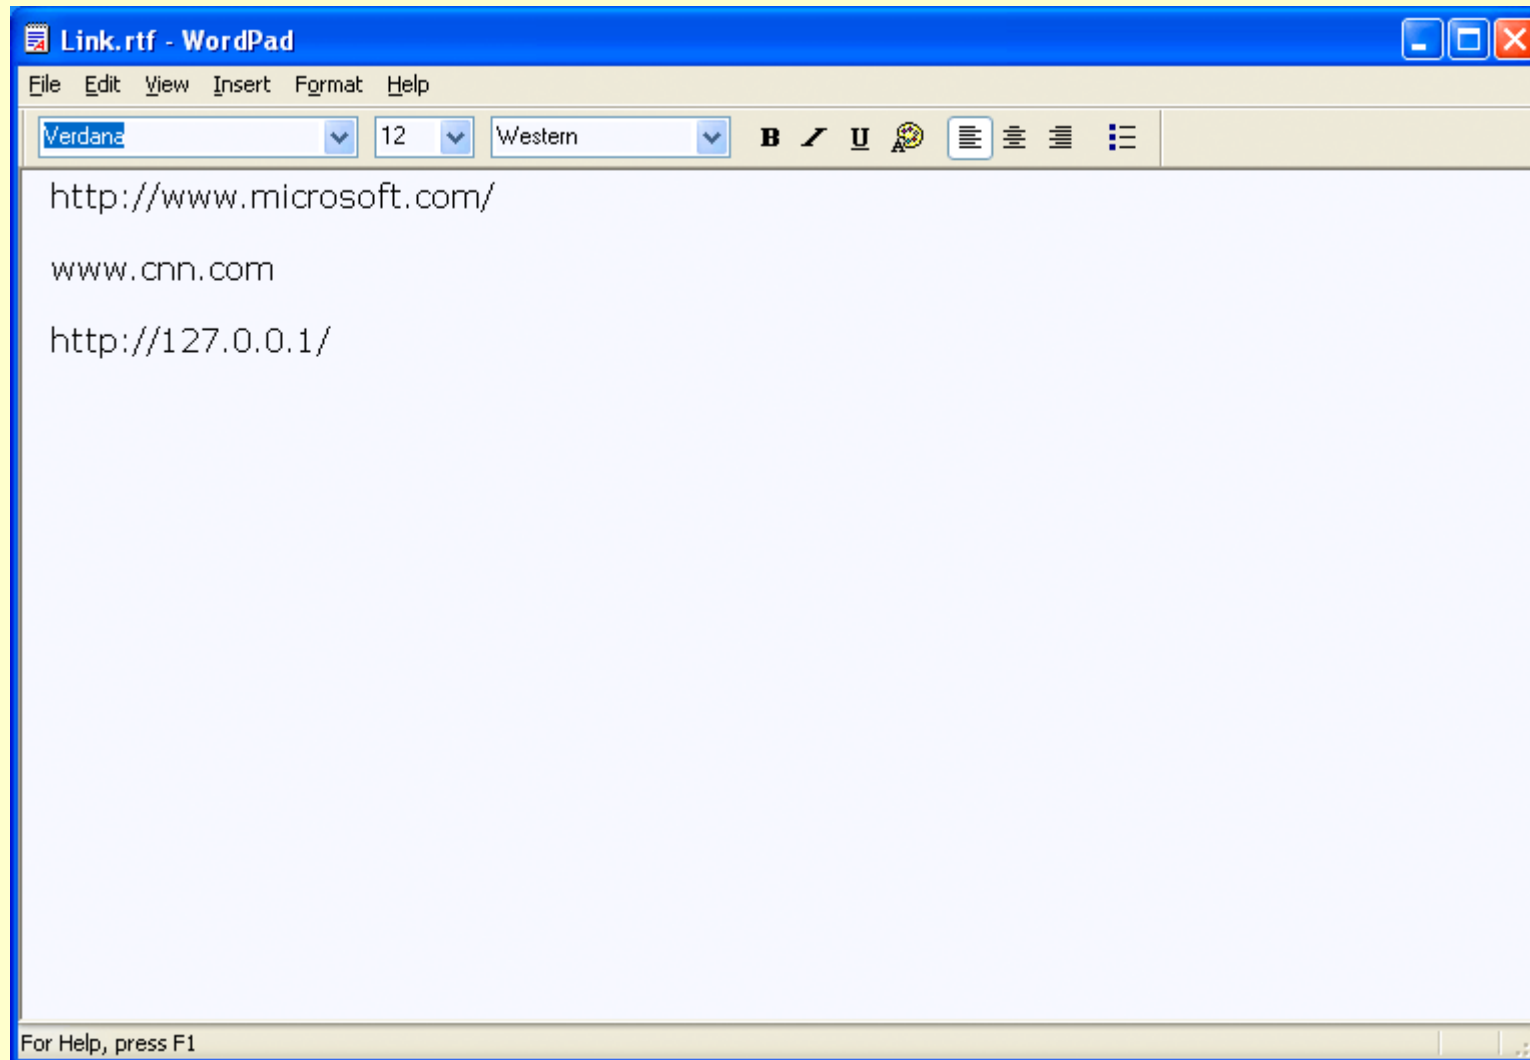

Unlike *Windows WordPad* or *Windows Notepad*, the background color of CE Reader™ is not brilliant white. To protect your eyes, CE Reader™ uses a magic color as the background color. Your

eyes cannot be tired, even you keep watching the screen over four hours. As a result, you can read many contents on screen for a long time. It is quite suitable for reports or electronic books.

Note: Here “four hours” is an average test. Different people can vary. Besides, the test is based on Liquid Crystal Display. The time is shorter, if you use Cathode-Ray Tube.

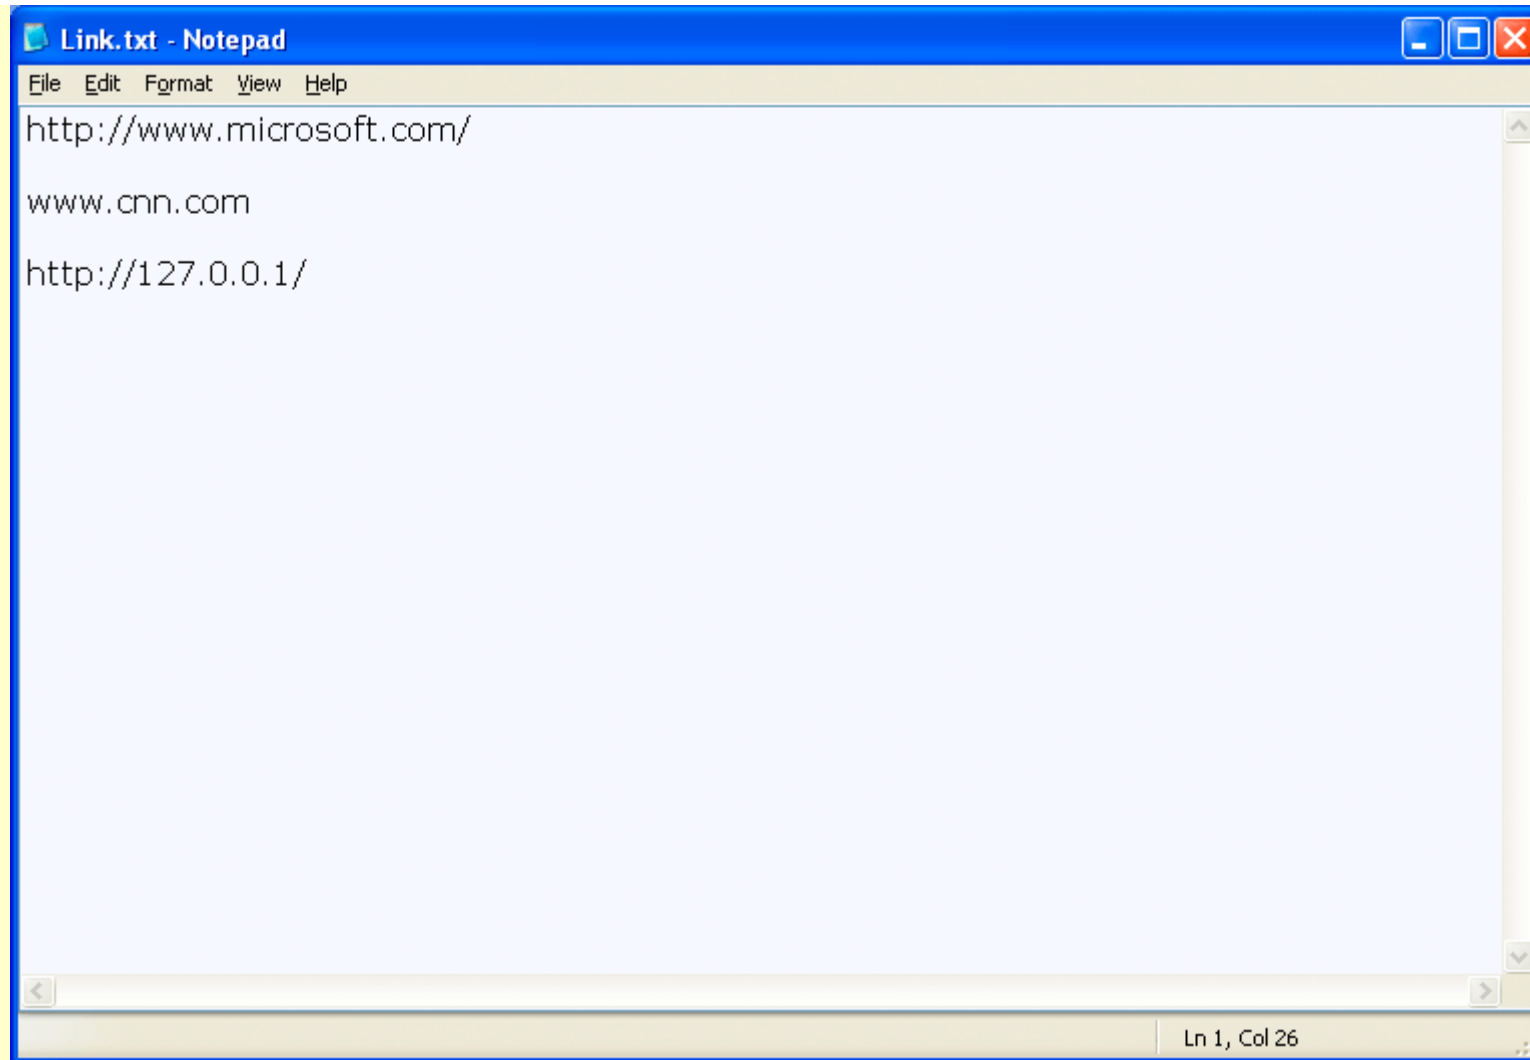

Tip: The new version adds several background colors for individuality. You can choose your favorite color. Please read the **Shortcut Key** Chapter.

Detect Hyperlink

It can detect hyperlinks. As a result, you can see the hyperlinks clearly.

For example, you can write down hyperlinks in a .rtf file.

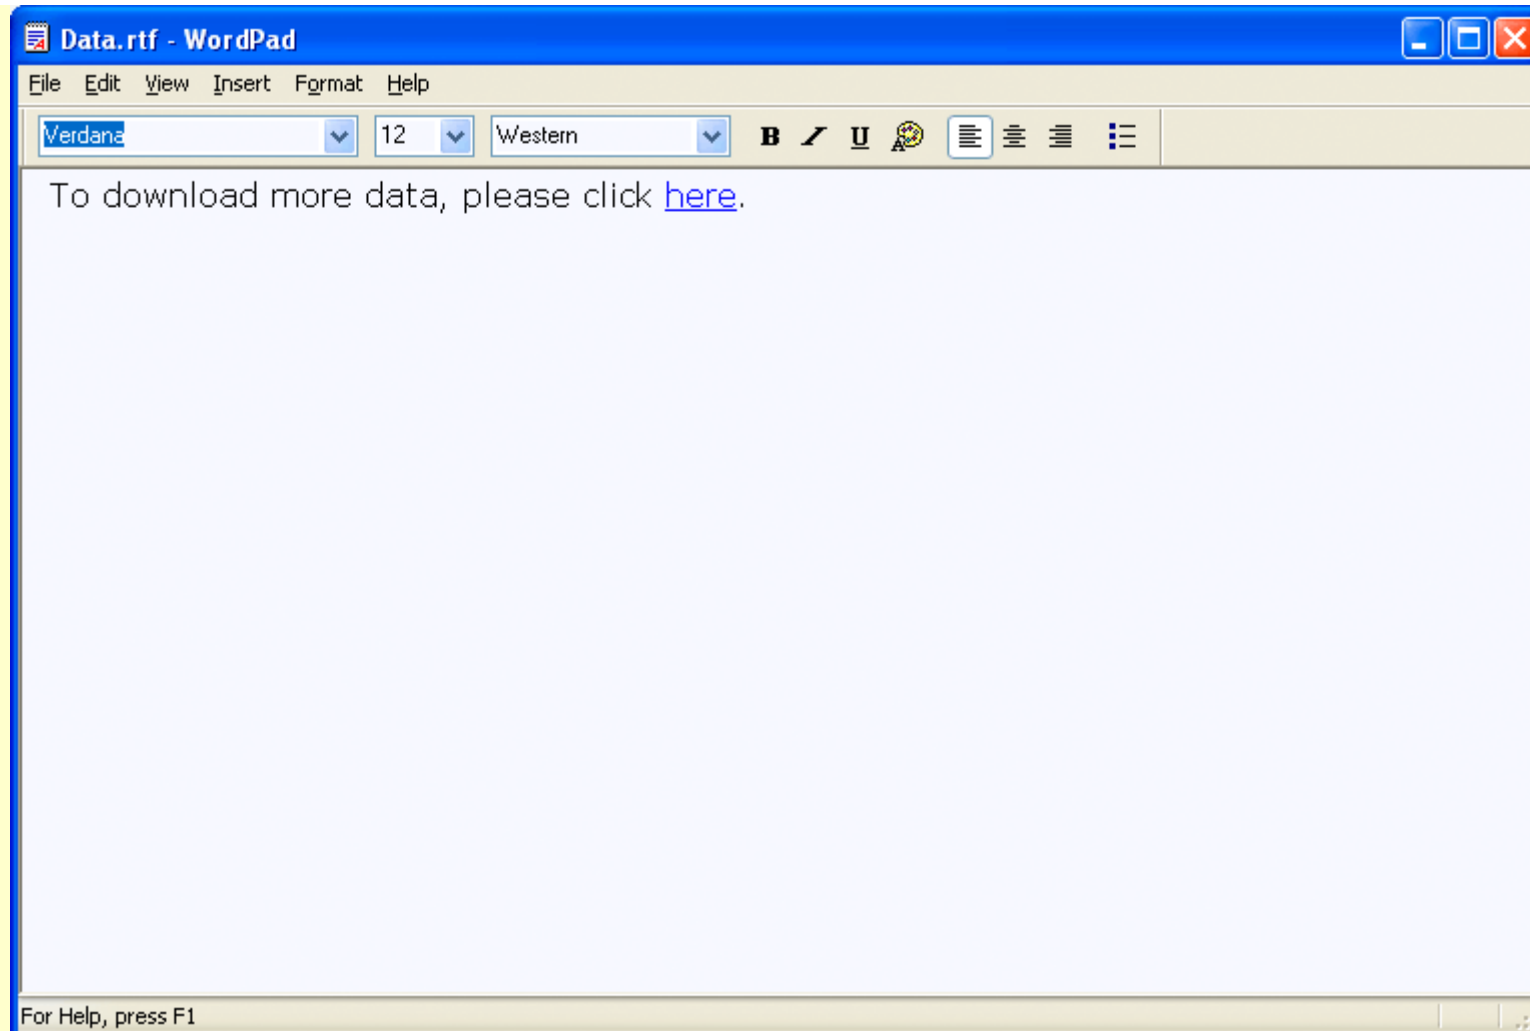

Alternatively, you can write down the hyperlinks in a .txt file.

<http://www.microsoft.com/>www.cnn.com<http://127.0.0.1/>

Use CE Reader™ to open the file. It can detect hyperlinks automatically. This function is quite useful. You can see or find hyperlinks inside an article with ease.

Note: To guarantee the security, you cannot click the hyperlinks and open Web pages.

Some hyperlinks are embedded behind words.

To download more data, please click [here](http://www.google.com/data.htm) <<http://www.google.com/data.htm>>.

CE Reader™ can show the hyperlinks behind words.

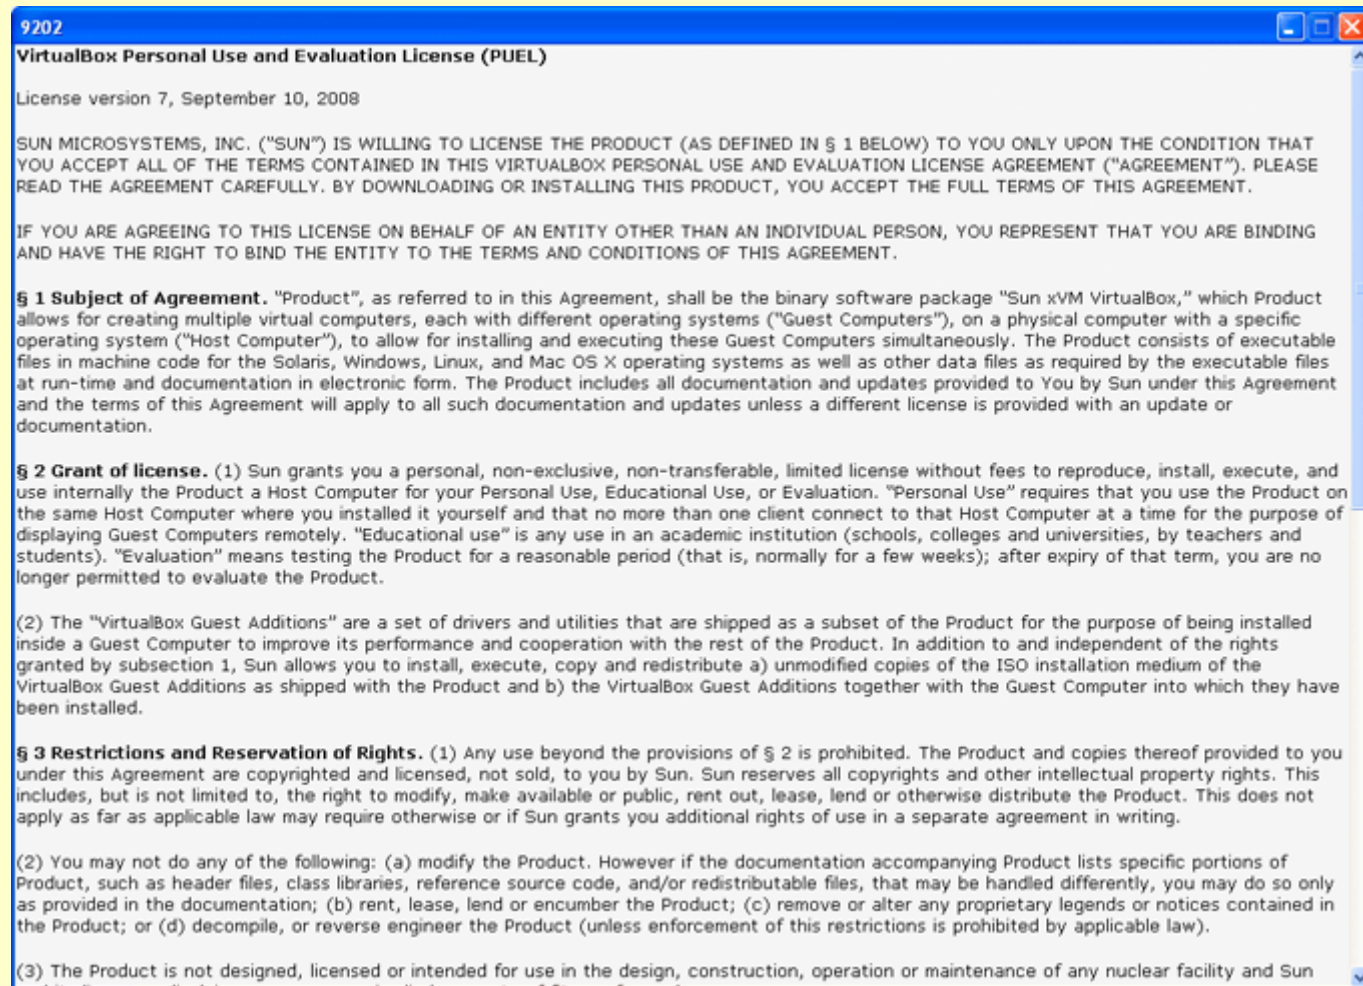

To download more data, please click [here](http://www.google.com/data.htm) <<http://www.google.com/data.htm>>.

Besides, you can select and copy the hyperlinks directly.

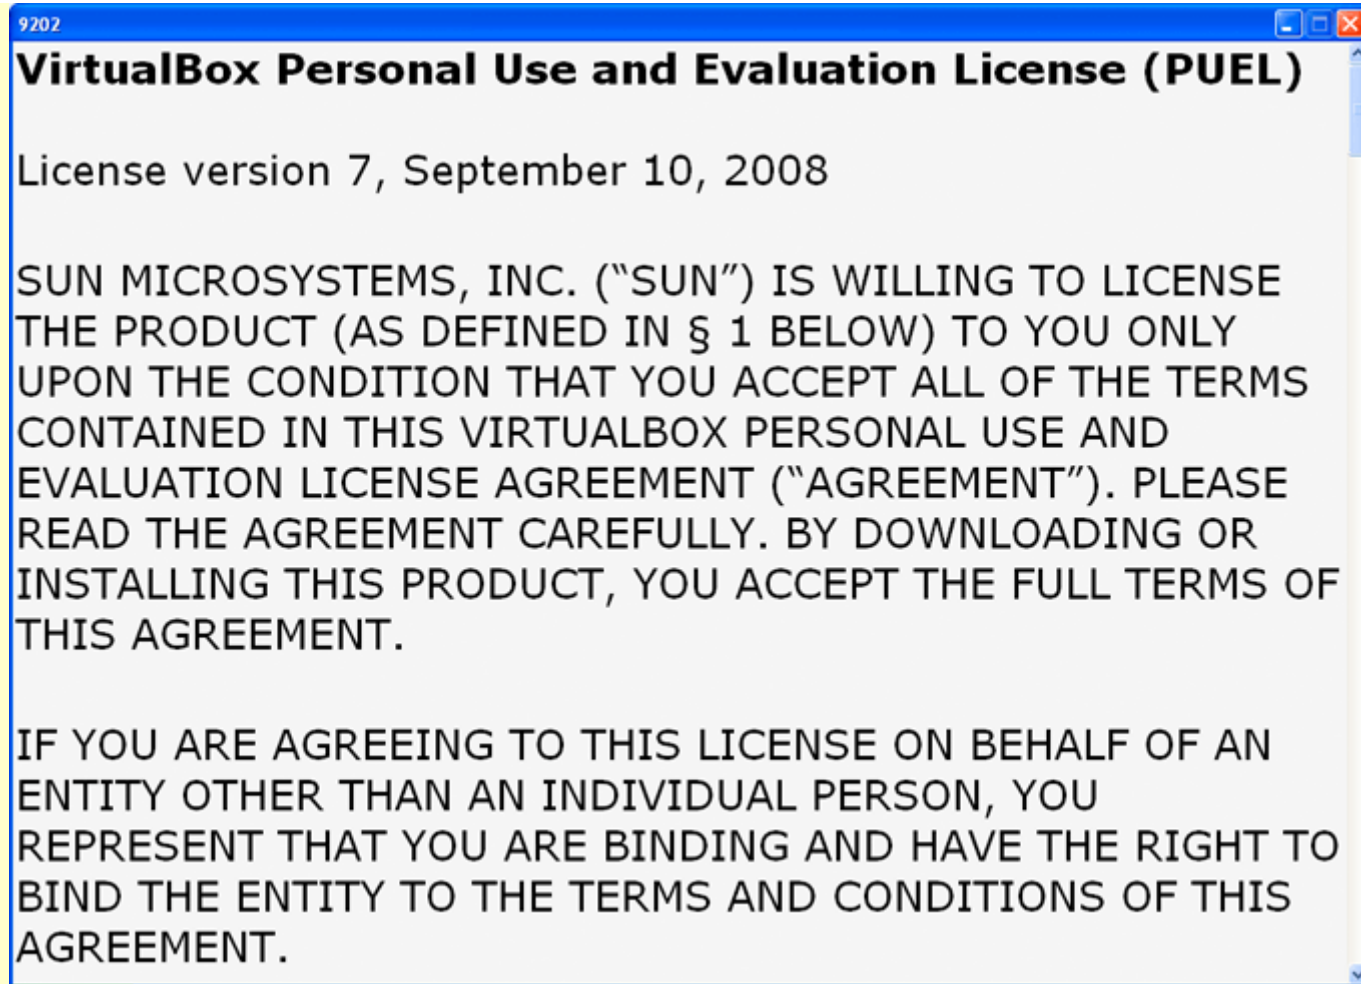

You cannot copy the hyperlinks in *Microsoft Word Viewer* or *Microsoft Word*. This is the advantage of CE Reader™.

Zoom

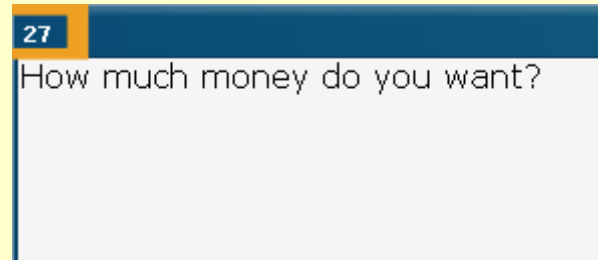

Sometimes, the font-size is too small. In this case, you can press **<Ctrl>** key and roll the mouse wheel to enlarge it. Also, you can make the it smaller.

Words can wrap automatically, if they reach the right border of the window. This is quite different for *Adobe Reader*.

Tip: Sometimes, you cannot zoom back the file to original view accurately. In this case, you can open the file again.

Word Count

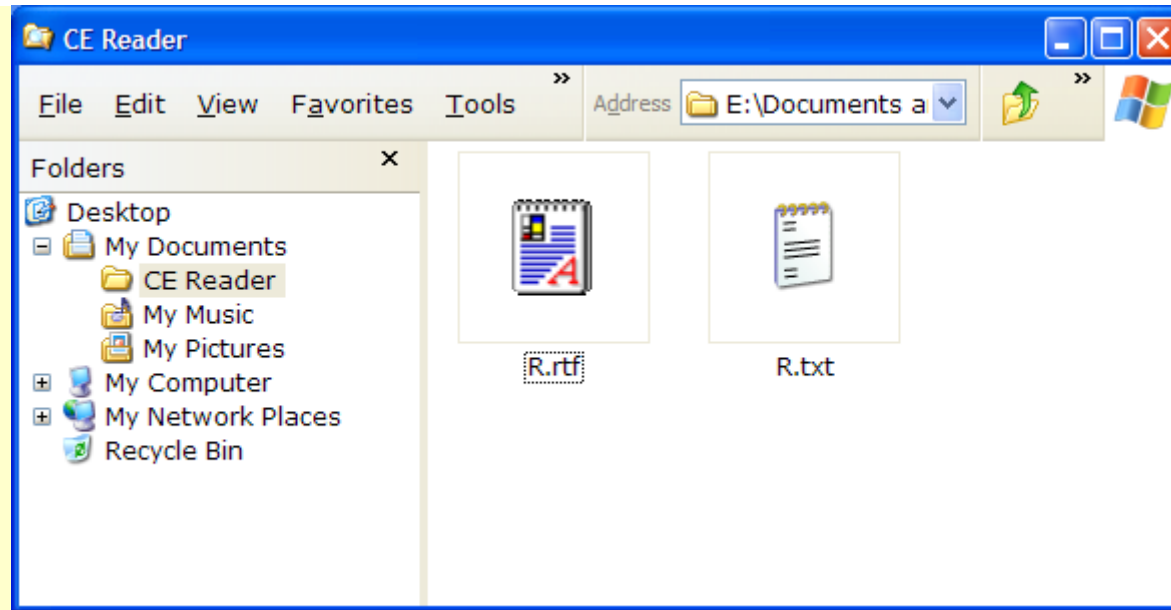

Note that the title bar always shows the amount of characters. It will do this job automatically, after opening files. You do not have to press any key to see the amount of characters.

Tip: On average, one English word consists of five characters. For example, you can assume that 2000 characters equal 400 words.

Convert

It can convert the file into .rtf and .txt files. The encoding of the .txt file is UTF-8. As result, characters cannot be lost. For example, a RTF file may contain ©®. After saving it as a ANSI .txt file, they will become **??**. It means that the characters have been lost.

You can directly copy the content and save them as RTF or TXT files as you like. However, sometimes, you may forget about the encoding and lose the characters. This function can be helpful for you.

You can press **<Ctrl+S>** key to save the file and convert the file formats. Besides, it will remove all the new lines and spaces in the tail. As a result, you can save much paper when printing. The files are R.rtf and R.txt. They will located in:

My Documents\CE Reader

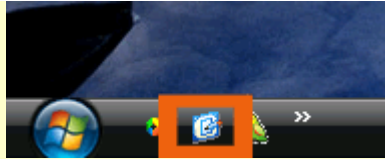

Tip: The encoding of RTF cannot be changed. It uses its default encoding. This is the same as PDF. If the file type is not RTF or TXT, it will remain its original file type. Besides, the content will be added to a .rtf and a .txt files.

Invisible Mode

Sometimes, you need to leave your computer for a while. You may have to get reports, drink coffee, or go to toilet temporally. Definitely, you do not want others to see your contents, because they may be sensitive.

In this case, you do not have to close all the windows one by one or exit the program. Through the invisible mode, you can hide all the windows behind the desktop.

You can simply click the “Desktop” icon on taskbar. Alternatively, you can press **<Win+D>** key.

Tip: **<Win>** is the key, which has the logo of Microsoft.

All the windows will disappear immediately, without leaving any vestige. It is the magic of this software.

After clicking the "Desktop" icon or press **<Win+D>** key again, you can see all the windows for the second time.

Shortcut Key

You can press shortcut keys on your keyboard. Combination keys mean that you keep pressing the first key and then press the second key. For example. **<Ctrl+A>**: Keep pressing **<Ctrl>** key and then press **<A>** key.

<Ctrl+O>: Open .rtf files.

<Ctrl+T>: Open .txt files.

<Ctrl+Q>: Open .xml files.

<Ctrl+W>: Open source codes of Web pages.

<Alt+W>: disable or enable word wrap.

<Shirt+Arrow>: Select the words.

<Ctrl+Mouse Wheel>: Zoom the content.

<Ctrl+S>: Convert the file formats, and remove the new lines and spaces in the tail.

<Ctrl+M>: Minimize the window.

<Alt+F4>: Close the window and exit program.

<Alt+~>: Set the background color into default color.

<Alt+1>: Set the background color into blue.

<Alt+2>: Set the background color into pink.

<Alt+3>: Set the background color into burly-wood.

<Alt+4>: Set the background color into light-yellow.

<Alt+5>: Set the background color into wheat

<Alt+6>: Set the background color into light-blue.

<Alt+7>: Set the background color into yellow-green.

<Alt+8>: Set the background color into thistle.

<Alt+9>: Set the background color into olive.

<Alt+0>: Set the background color into goldenrod.

<Alt+->: Set the background color into green-yellow.

<Alt++>: Set the background color into violet.

<Alt+[>: Set the background color into silver.

<Alt+]>: Set the background color into light-gray.

<Alt+\\>: Set the background color into white.

It works on the background, and does not influence Web pages and other programs at all.

Its interface has been designed carefully. The operating system cannot be hurt even users operate this editor mistakenly and blindly.

It requires a little resources of CPU and memory.

FAQ

Q: Does CE Reader™ change the contents?

A: No. CE Reader™ is just a file reader, not editor. It can read files on screen, but does not change the contents of the files at all. You do not have to worry about it.

Q: How to edit the contents?

A: You cannot edit the contents in CE Reader™. You just need to double-click the .txt files to open and edit them through *Windows Notepad*. Similarly, you can double-click the file to open and edit them through *Windows WordPad*. Unlike PDF files, you do not have to edit them through third party products. CE does not have a product called *CE Acrobat*.

Q: Can CE Reader™ open .doc, .docx or .odt files?

A: No. CE Reader™ cannot read .doc, .docx or .odt files. You have to use *Microsoft Word* or *OpenOffice* to save the files as RTF or TXT first.

Q: Why CE Reader™ does not remove new lines and spaces in the head?

A: You can judge the new lines and spaces in the head of an article, according to the position of the first word, although you cannot see these special characters on screen directly. As a result,

you can directly delete the new lines and spaces by hand. Besides, new lines and space in the head can be useful. For example, the title requires some spaces in front, so that it can be in the center. However, the new lines and spaces in the tail are different. You cannot judge them directly, because no words are behind them. Vitally, they are totally useless. Therefore, CE Reader™ does not remove the new lines and spaces in the head of an article.

Q: Can CE Reader™ read Web pages like a browser?

A: No. CE Reader™ reads the characters of .htm, .js, .php, .aspx, .asp, .jsp, .css, and .axd files, not browsing Web pages like a browser. It means that it only reads the source code of Web pages, not displaying XHTML, CSS, image or other Web page elements. If you want to browse Web pages like a browser, you should use CE Viewer™.

Understanding RFT

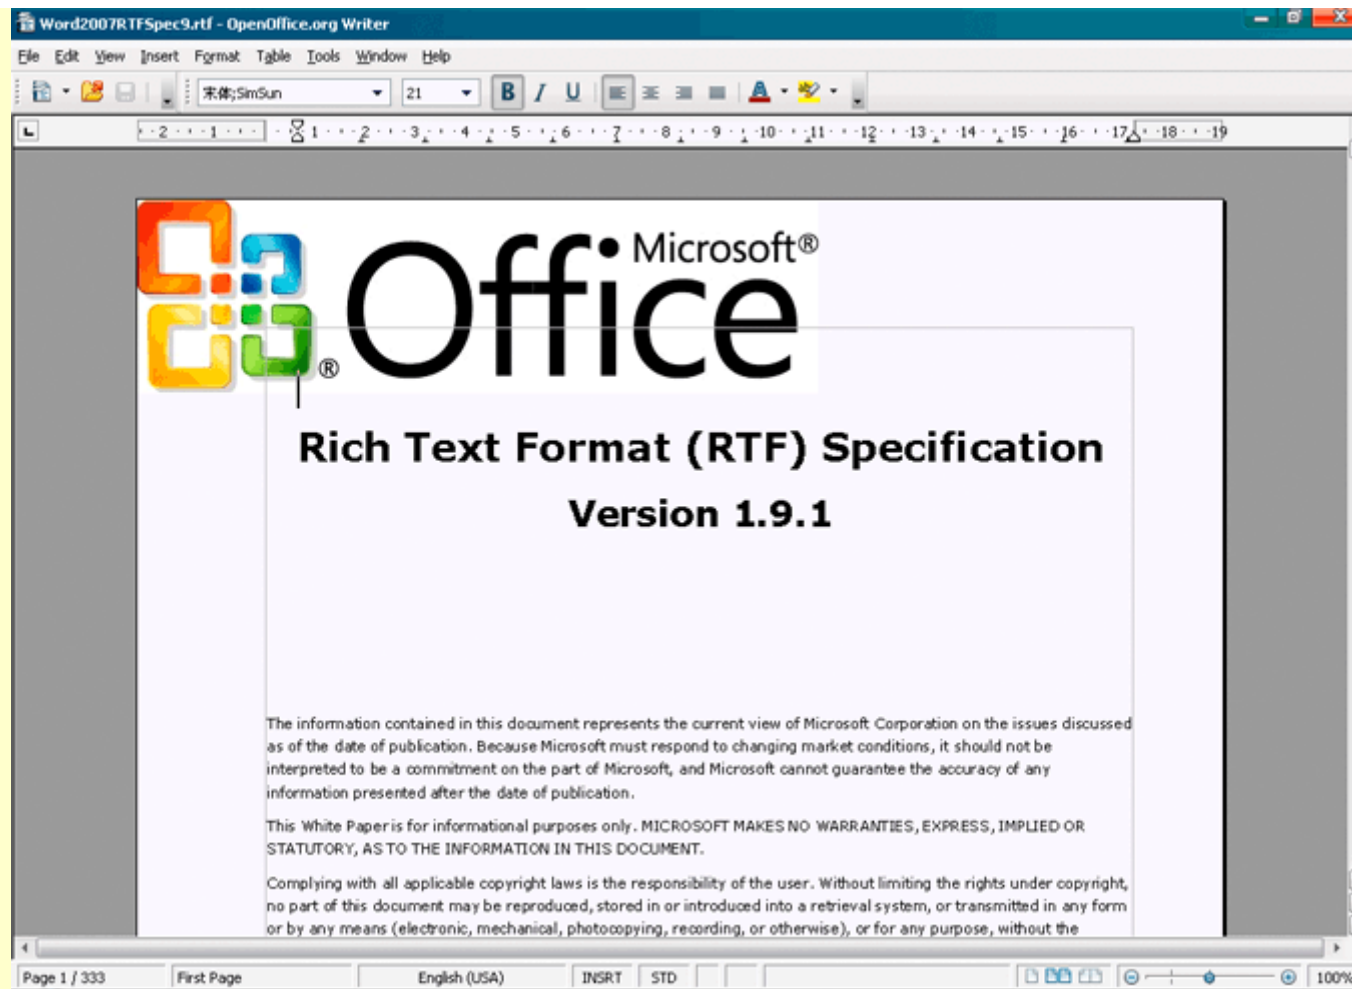

Most people are not familiar with RTF because of Microsoft. Microsoft intentionally reduce your attention and interest, so that you can spend much money buying the *Microsoft Office* software year by year. In fact, RTF is a mature file format. It can remain most of the formats of *Microsoft Word* or *OpenOffice*.

Microsoft Word files, which includes .doc or .docx files, have various problems.

1. *Microsoft Word* can reduce the quality of images automatically.
2. The .doc and .docx files may contain virus.
3. The .doc and .docx files can be broken easily.

In the past, old smart phones and old versions of Linux and Mac operating systems can only supports .txt files. For .txt files, all the font-sizes are the same, and they do support bold, italic, underline formats. Besides, they do not support colors, tables or images. A .txt file looks like a wall. Your eyes can be quite tired after reading .txt files for a short time.

Nowadays, many electronic books use RTF instead of TXT. Many new smart phones and operating systems, have already supported RTF, except for TXT. Vitally, the cost creating a .rtf file is much cheaper than the one of a .txt file. Book publishers can simply use *Microsoft Word* or *OpenOffice* to save the files as RTF files. Unlike .txt files, they do not have to adjust spaces or new lines for .rtf files.

You can use *Microsoft Word* to save a .doc or .docx file as a .rtf file. Later, you just need to edit the format slightly in *OpenOffice*. The formats can be the same as *Microsoft Word*.

Most people do not know the value of RTF. Similarly, most people do not know the values of stocks. They just use stocks as gambling tools.

Through RTF files, you can remain all the contents and nearly all of the formats of *Microdot Word* and *OpenOffice*. Besides, you can use RTF as a bridge between *Microsoft Word* and *OpenOffice*. Similarly, you can use it in Linux and Mac operating systems. Vitally, you can copy the contents to *Microdot Word* or *OpenOffice* directly without any lost. This is quite different from PDF.

Just like Web pages, the RTF format has become an industrial standard, although it is still controlled by Microsoft.

RTF supports font, table and image. It is an excellent file format. You can use RTF as **Desktop Web page**.

RTF VS PDF

Many people mistake that PDF files cannot be changed. In fact, PDF files can be changed with ease, just like RTF and TXT files. You cannot change them because of the PDF readers. The software intentionally prevents you changing the contents, not the files themselves. The text boxes of the PDF readers are read-only. As a result, you have to buy the commercial software. For example, you have to buy the expensive *Adobe Acrobat* software in order to create or edit PDF files.

PDF has its own disadvantages. Your colleagues and clients can hardly copy the formats of .pdf files directly, if they need to edit the contents. Some contents, such as tables and images, can be lost. Converting PDF to *Microsoft Word* is a terrible job. You stupidly send the .pdf files to them. Your colleagues and clients can be quite angry.

RTF is quite suitable for distribution, although it is not suitable for fixing the layout. It has its own advantages:

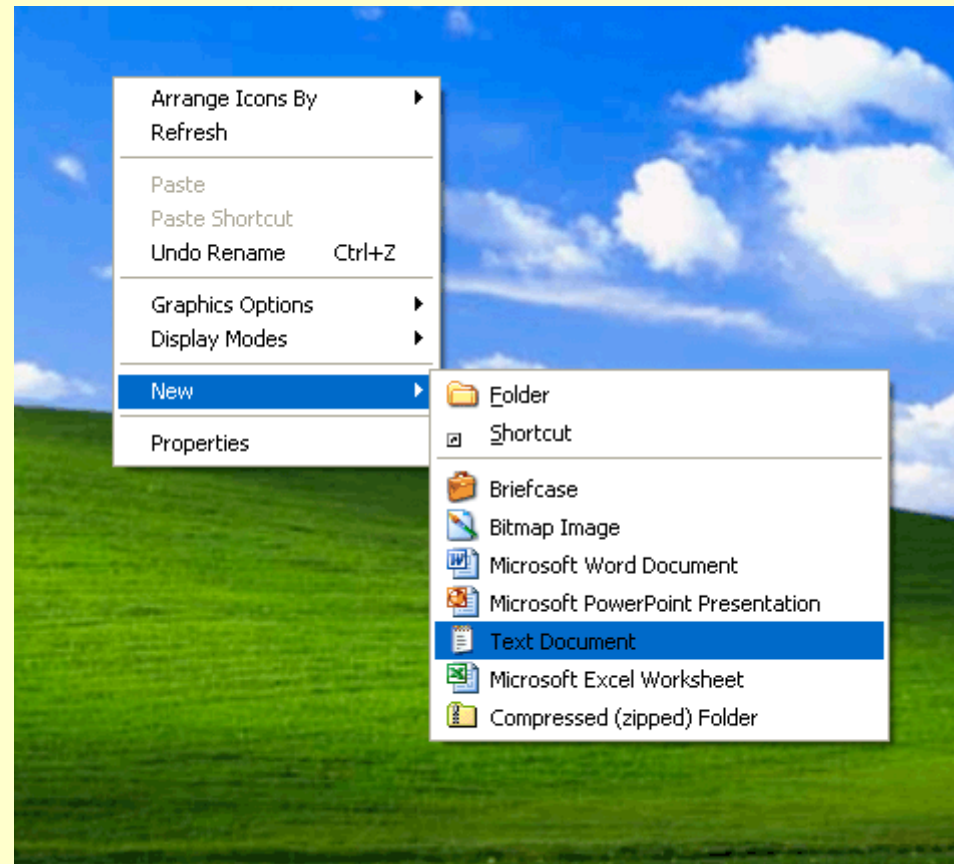

1. RTF does not contain any virus, spyware or adware inside.
2. RTF does not compress any data.
3. The files of RTF cannot be broken.

4. The contents inside RTF can be copied with ease.

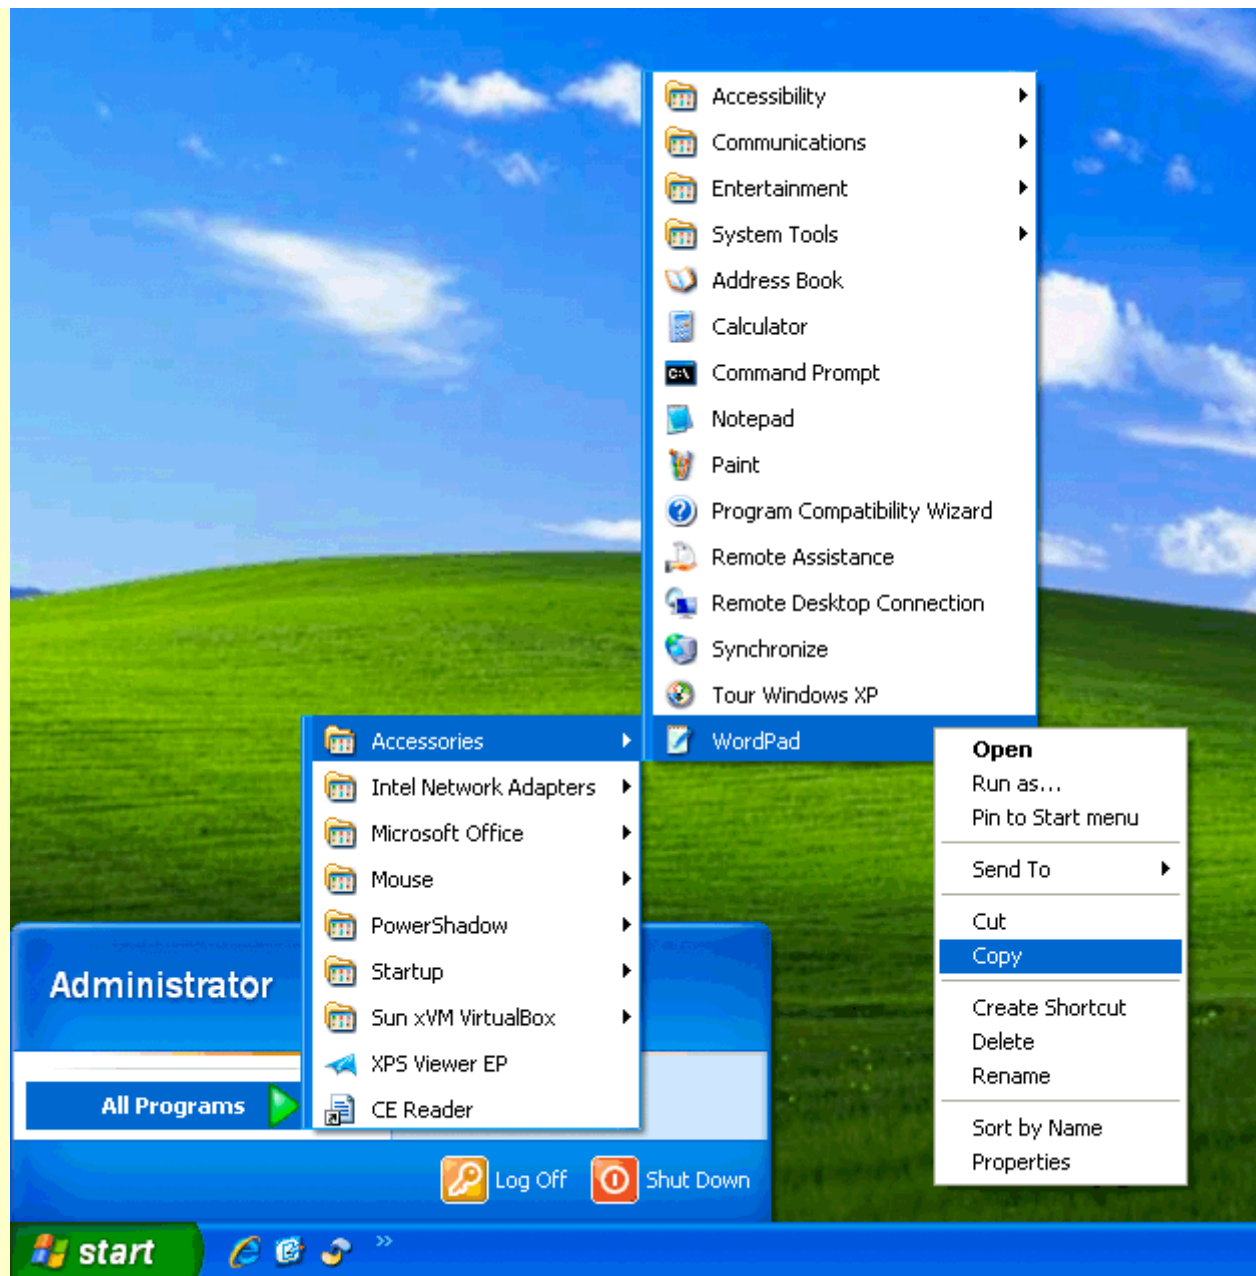

5. RTF can be opened in various operating systems, and small machines.

CE Reader™ has solved the problem of changing the contents mistakenly. From now on, you can use RTF as a standard file format. It will be wildly used in the upcoming future.

Create RTF with ease

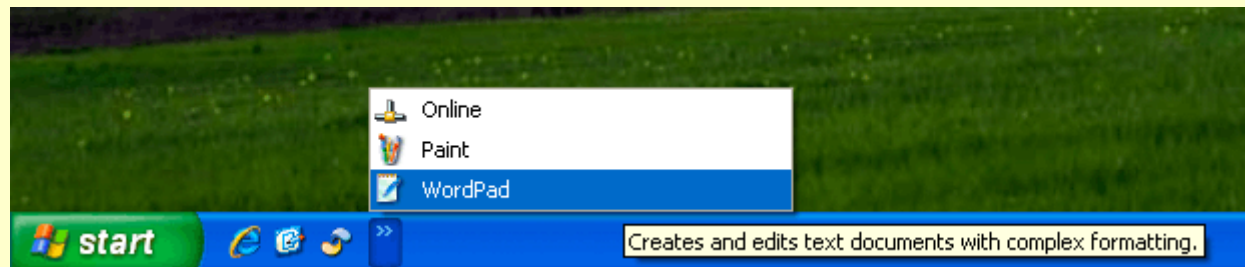

You cannot right-click the desktop and then create a new .rtf file with ease. This is the evil of Microsoft.

To solve this problem, you can copy the icon first.

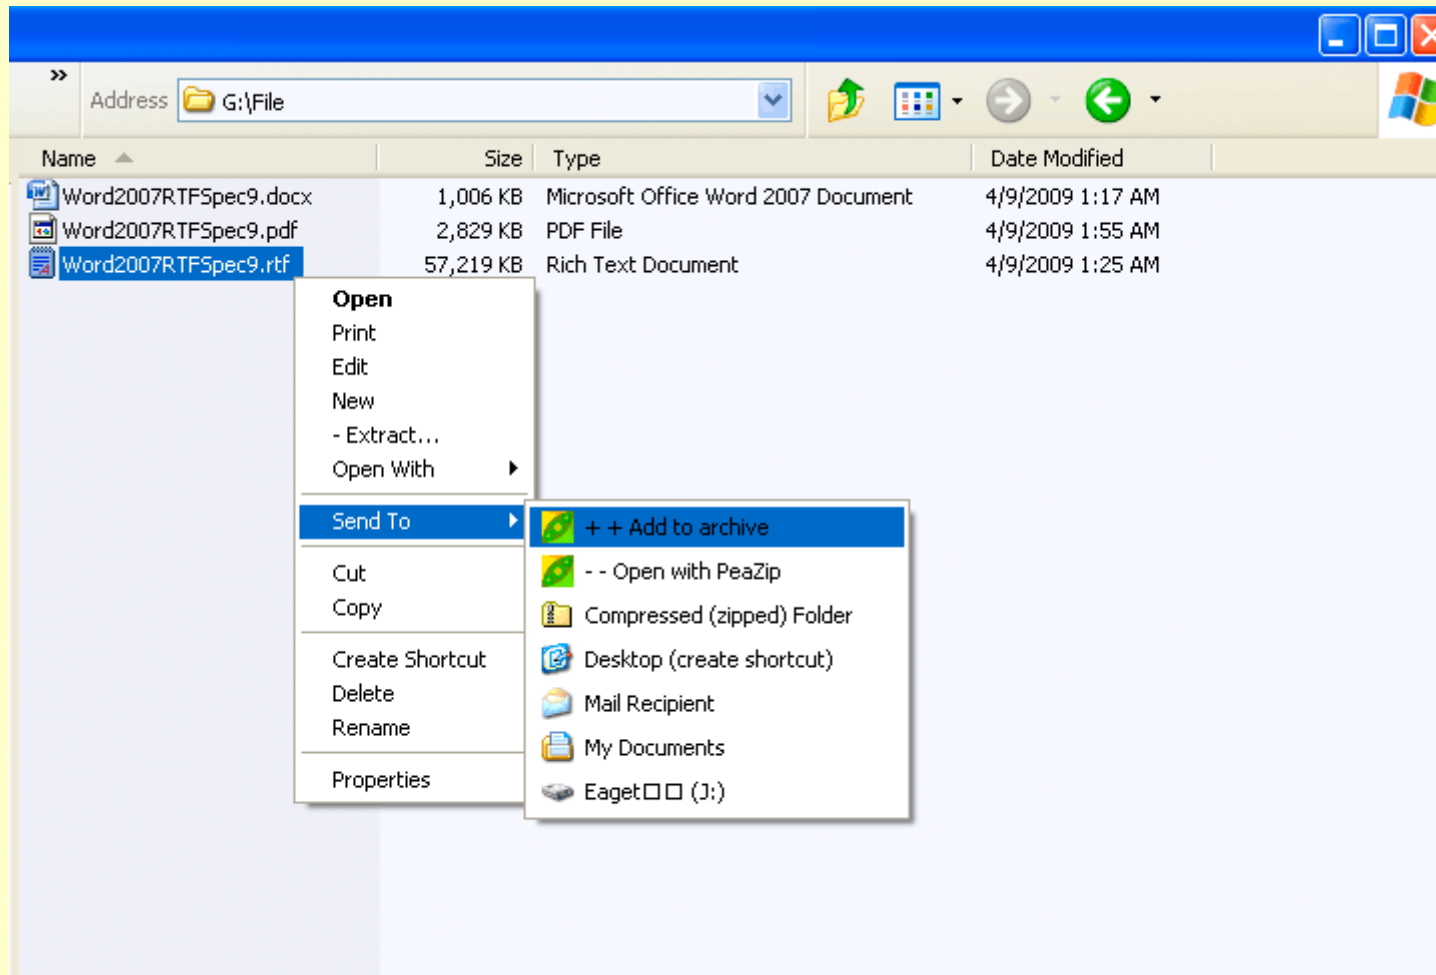

Then, you can paste it to the desktop.

Finally, you can drag the icon to the Quick Launch.

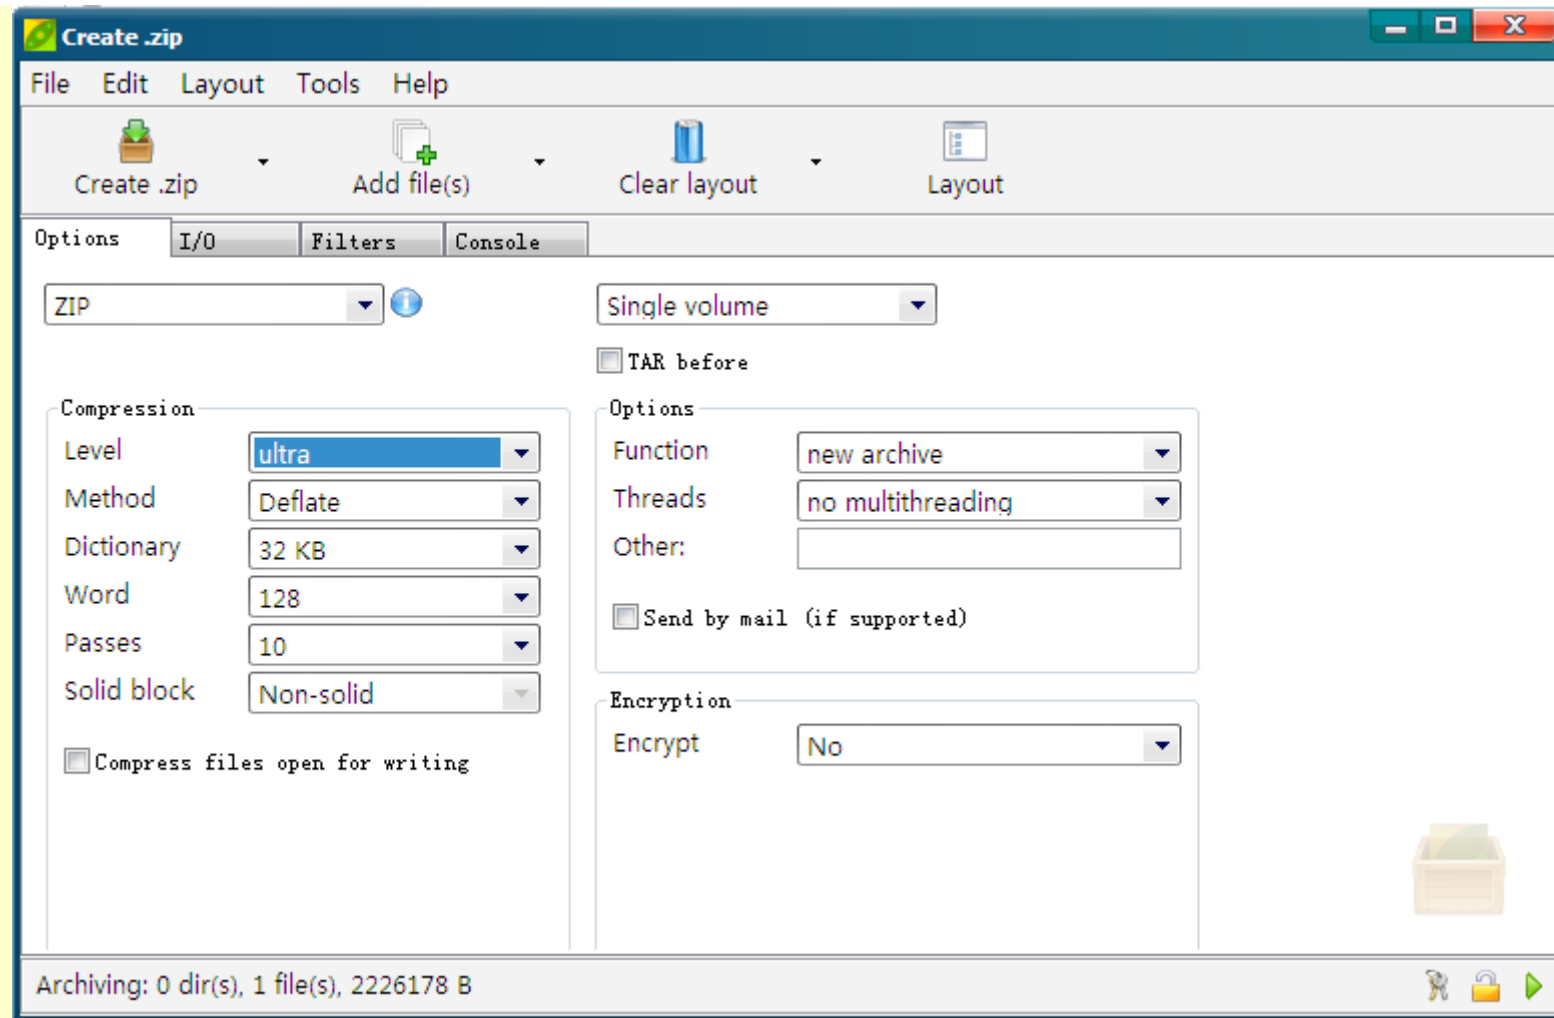

Now, you can create a .rtf file with ease.

Compressing RTF

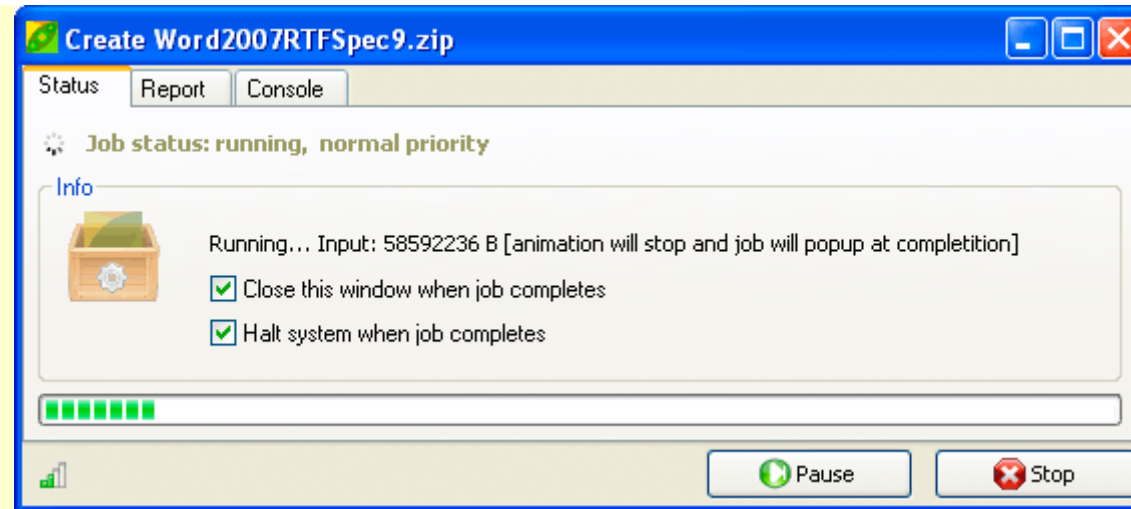

Sometimes, the file size of a .rtf file may be quite large, because it does not compress any data. Simply, you can use *Peazip* to compress the files before sending to your clients or colleagues. You can download *Peazip* at:

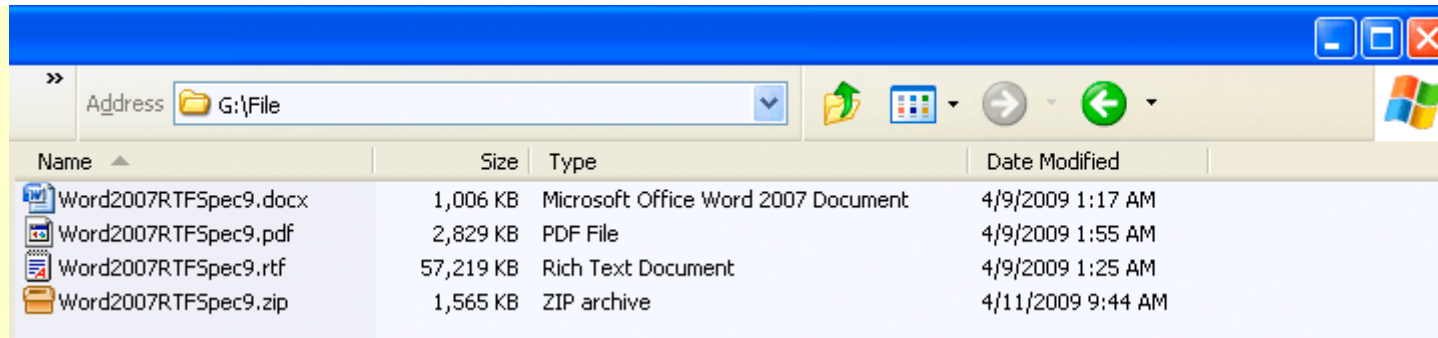

<http://peazip.sourceforge.net/>

Click "Options" button in upper-right corner. Then, select [ZIP] menu, and select [Ultra] level. Finally, click "Create .zip" button in upper-left corner.

It will compress the file immediately.

Finally, you can create the .zip file. You can see that the file size is reduced greatly.

This is not the advertisement of *Peazip*. It just tells you how to compress .rtf files. The file sizes can be smaller, if the .rtf files do not contain images inside. Images can hardly be compressed.
