AUDIO UNIT INSTALLATION
Instructions

The plugin folder is nested in the Macintosh HD Library. There are usually a minimum of two Libraries on your Mac, one in Macintosh HD and another in your user account. You should only place the plugins in the Macintosh HD Library so that it can be accessed by all users on the computer. The usual location of the folder should be:

Macintosh HD/Library/Audio/Plug-Ins/

How to Install AudioUnits Plugins

1.Unzip the downloaded file if it is an archive like .zip or .rar. You should only see a file with a .component extension. This is the actual file required for the plugin.

2.Move the .component file to the Components folder in your audio plugins folder.

3.If your DAW is running, close it and restart it. When your DAW starts up, it will rescan your plugins folder and detect your recently installed plugin.
