PLEASE DO NOT MAKE ILLEGAL COPIES OF THIS SOFTWARE

The software you are using was produced through the efforts of many people: independent producers, production studios, programmers, distributors, retailers and other dedicated workers.

The costs of developing and delivering to you this and other software programs are recovered only through software sales. The unauthorized duplication of personal computer software raises the cost to all legitimate users.

In addition, the same federal copyright law protects this software as your organization's video productions. Copying software for any reason other than to make a backup is a violation of law. Individuals who make unauthorized copies of software may be subject to civil and criminal penalties.

Imagine Products, Incorporated supports the industry's efforts to fight the illegal copying of personal computer software.

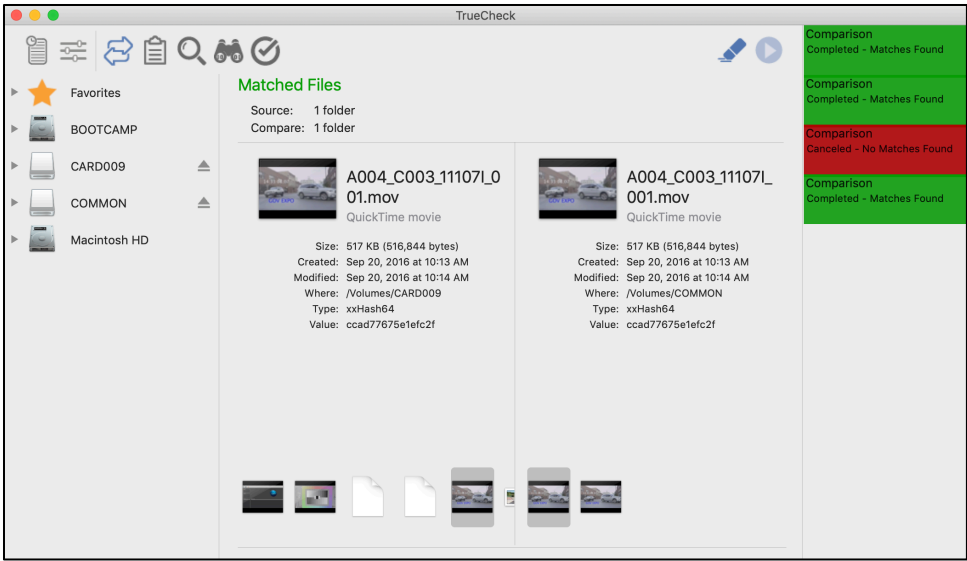

WARNING! Copyright law and international treaties protect this computer program. Unauthorized reproduction or distribution of this program, or any portion of it, may result in severe civil and criminal penalties, and will be prosecuted to the maximum extent possible under the law.

License

Please refer to the End User License Agreement (EULA) terms that you agreed to during download and installation of the application. The EULA is accessible from the application Help menu and on the website. Imagine Products, Inc. reserves the right to update the EULA with notification. By using this application you consent to the EULA terms.

Welcome

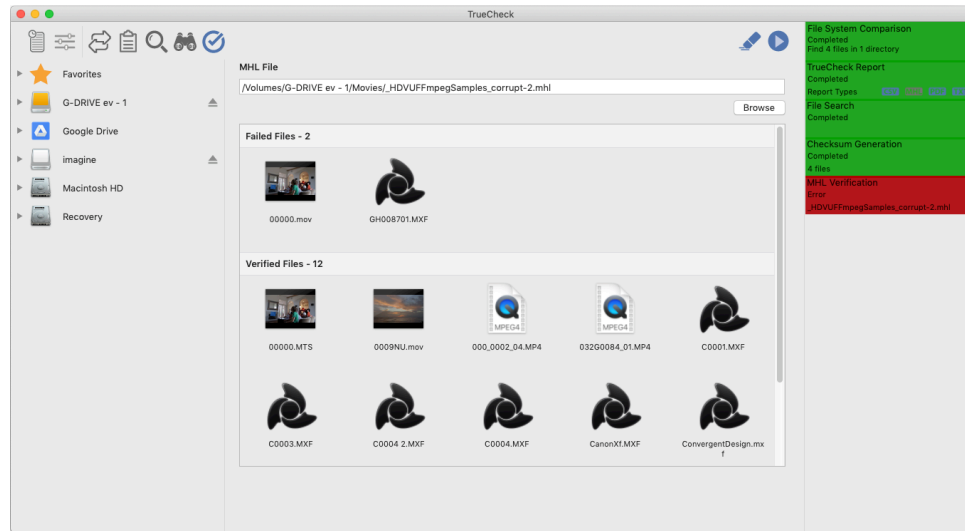

We're pleased that you've chosen **TrueCheck™** for Macintosh to help manage and index your media files, and keep your content organized between multiple workstations. We hope getting results is easy without looking at the documentation.

NOTE: This application is for late model Macintosh operating systems. Features and dialogs may vary slightly between them.

Overview

TrueCheck™ is a file analysis application that specializes in verification activities for media files beyond copying.

Comparisons: TrueCheck is a robust application for comparing volumes, folders and files to determine what's the same and what's different. Use it to identify missing files or find duplicates even if file names and paths have changed.

Reports: Create personalized (**ShotPut Pro®** style) PDF reports with metadata and thumbs of any folder or entire volume (without copying files). Generate Media Hash List (**MHL**) files to '**Seal**' a volume or folder of files. TrueCheck recognizes over 20 different camera formats including file based RAW from ARRI, BlackMagic, Canon, GoPro, JVC, Panasonic, RED, Sony and more.

Smart Searching: Look for media specific content across volumes and networks. Build complex queries by name, type, camera manufacturer, size or dates.

Checksums: Calculate values for any file or group of files including XXHash-64, MD5 and others.

MHL Seal: Test the integrity of volume's files previously sealed with a MHL, an important quality control check for your organization's workflow.

TrueCheck is designed as a modal type application meaning the activities you may perform are dictated by the

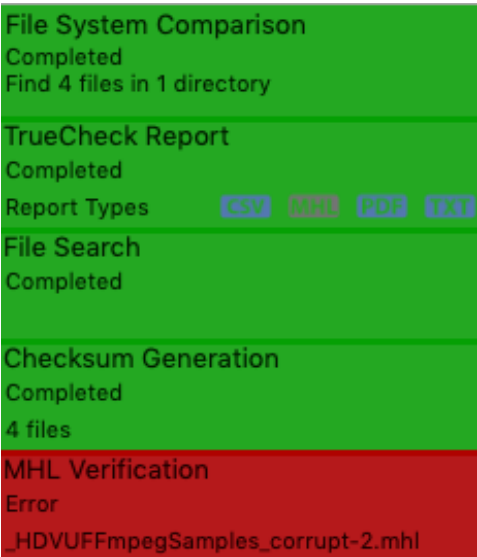

mode choice made by selecting the appropriate toolbar icon (Compare, Report, Search, View Checksums, Verify MHLs/checksums).

Operation specific **Preferences** directly affect processes and results. For example, you can set Comparison options to use checksums for matching. While more precise this will be slower than using File system attributes (e.g. dates, sizes, names, etc.) so checksums should only be used for verification purposes.

TrueCheck keeps an inventory of past activities as **Historical logs**. You may reload prior results from these lists.

Status at a Glance: Tasks have both progress bars and are color-coded to indicate status.

Double click a status to load results in the main display area.

For reports, you can click the report type to open the file.

Right-click for additional options.

Preferences

This section will help you enable the settings to perform in the manner you want in analyzing files and folders. If this is your first time starting TrueCheck, you will need to set a few default options.

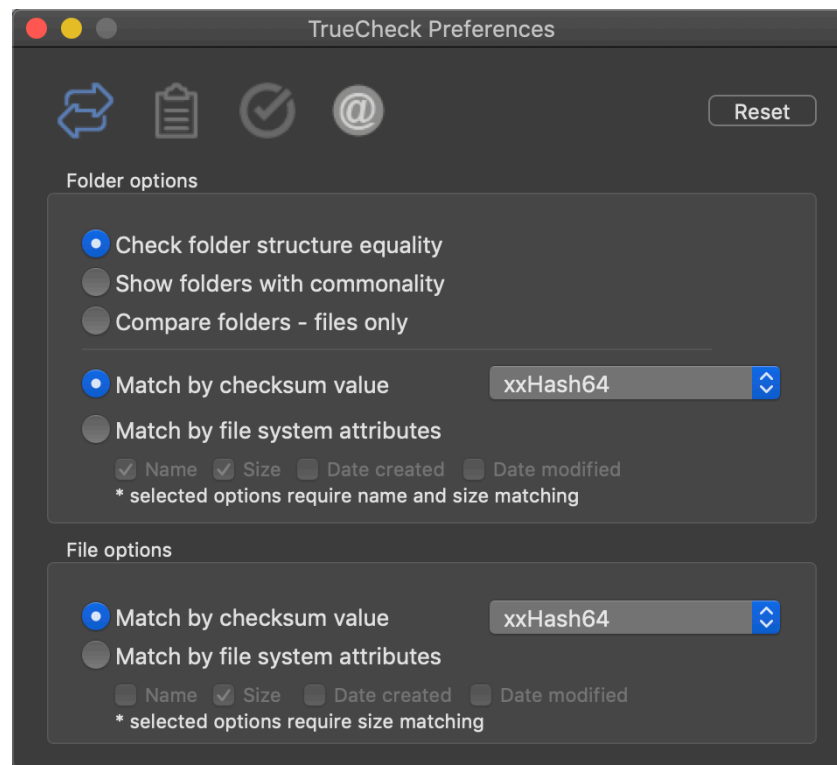

Click '**Preferences**' menu from the Application Menu or toolbar icon. Preferences are grouped by task type (Compare, Report, MHL verifications and notifications).

Note you may always '**Reset**' to default settings to clear your choices.

Comparison Preferences

Under '**Compare**' choose how folder and file matching will be processed.

There are two types of comparisons: **Folders** and **Individual Files**.

File Comparison Options

If the purpose of your comparison is simply to identify files that may match, use **'Match by file system attributes'** for fast, efficient results.

The screenshot shows a window titled "File options". Inside, there are two radio buttons. The first is "Match by checksum value" and is unselected. The second is "Match by file system attributes" and is selected with a blue dot. Below the radio buttons, there are four checkboxes: "Name" (checked with a blue checkmark), "Size" (checked with a blue checkmark), "Date created" (unchecked), and "Date modified" (unchecked).

Choose which attributes to match (Name, Size, Dates). You must select at least one.

Use **'Match by checksum value'** for more precise byte-by-byte matching, such as verifying copied files exactly match originals. This will be slower than using File system attributes because you're calculating checksum values for both items and then comparing those. To speed up the analysis, TrueCheck first compares by file **Size** (because these must match if the checksums are going to match). Then it generates the checksums of both items to compare with each other.

The screenshot shows the "File options" window. The "Match by checksum value" radio button is selected. To its right is a dropdown menu showing "xxHash64". Below the radio buttons, there are four checkboxes: "Name" (unchecked), "Size" (checked), "Date created" (unchecked), and "Date modified" (unchecked). At the bottom, there is a note: "* selected options require size matching".

Choose the type checksum hash algorithm you'd like to use for comparison purposes. XXHash-64 is typically the fastest method, as it can run at near RAM speed, while older types such as MD5 are 32-bit processing and use CPU.

TIP: After completing a comparison you may output a CSV report of results by **right-clicking** on the status and choose **'Report'**. For other report types, use the Report feature to create a manifest of the files.

Folder Comparison Options

Unlike simple file comparisons, results for folder comparisons have more possible permutations. For example, entire folders and their contents may exactly match, or just contain some matching files, or perhaps contain subfolders whose contents match. Therefore the options and display options are necessarily more complex than just a list of files.

Folder options

- ☒ Check folder structure equality
- ☐ Show folders with commonality
- ☐ Compare folders - files only

Check folder structure equality

'**Check folder structure equality**' instructs TrueCheck to analyze selected folders for full mirror image matching of subfolders.

Show folders with commonality

'**Show folders with commonality**' means look for any similarities of the primary files and folders (not nested items) of the folder dropped into '**Find**' area. This is essentially a 'contains' type comparison, so partial matches and differences will be indicated.

Compare folders – files only

'**Compare folders - files only**' looks for matches of files within nested folders, regardless of folder names or where the files are located.

Folder attributes options

All of the folder comparison options are influenced by which matching mechanisms are used.

☒ Match by checksum value xxHash64

☐ Match by file system attributes

☒ Name ☒ Size ☐ Date created ☐ Date modified

* selected options require name and size matching

TIP: Use checksums to find matches regardless of names.

Report Preferences

Reports can be an important bookkeeping tool, and even used for simple offline search indices. Click the **'Report Preferences'** button to setup.

The image shows the 'TrueCheck Preferences' window on a Mac. At the top, there are four icons: a circular arrow, a clipboard, a checkmark, and an '@' symbol. A 'Reset' button is in the top right. Below the icons, the 'Report name' field contains 'TrueCheck Report Monday'. A checked checkbox 'Include checksum values in report' is followed by a dropdown menu showing 'xxHash64'. Under 'Reports written to source', there are two options: 'MHL' (checked) and 'Separate file of checksums' (unchecked). The 'Standard reports' section has three radio buttons: 'PDF' (checked), 'TXT', and 'CSV'. Below this is a 'Formatting' section with two radio buttons: 'Detailed' (selected) and 'Summary'. The 'Location' field contains '/Volumes/BIGBOY' with a 'Browse' button. There is an unchecked checkbox 'Add notes to reports' and a text box containing 'Data Wrangler' and '800-555-1212'. The 'Additional PDF formatting' section has two radio buttons: 'All files' (selected) and 'Video files only'. It also has a checked checkbox 'Include thumbnails for video files' and an unchecked checkbox 'First thumbnail matches first frame'. Below these are 'Thumbnails per clip' options: a radio button, a single image icon, a selected radio button, and four image icons. There is a checked checkbox 'Customize PDF header image' with a 'Browse' button and a text field containing '/Volumes/COMMON/company_logo.png'.

Report Name

Type in a default name for the report. If more than one report is output, incremental numbering will be added (_1, _2, etc.) automatically.

Verification Files

TrueCheck can output two different types of checksum verification files. Select an industry standard Media Hash List (**MHL**) type or a simple text list of files and checksums.

MHL files adhere to the organization's formatting and naming standards (see www.mediahashlist.org/mhl-specification). MHL lists contain relative paths to files and their original checksum values. These are always saved just outside the referenced folder or file's location.

Text Checksum Files are named by the verification type (e.g. **yourFile_todays_date.md5**).

With either of these type files, you can check the integrity of your video files throughout your workflow and network.

Standard Reports

TrueCheck offers several standard report formats including '**PDF**', '**Text**' and '**CSV**' types. PDF is a Portable Document Format used by Adobe Acrobat readers. The Text type is a simple human readable form, while **CSV** (comma separate values) is a format that's readily compatible with spreadsheets.

Report Formatting

Select how much detail your report will contain.

A screenshot of a 'Formatting' dialog box. It has a title bar that says 'Formatting'. Inside, there are two radio buttons. The first is labeled 'Detailed' and is selected, indicated by a blue dot. The second is labeled 'Summary' and is not selected, indicated by a white dot.

'**Detailed**' type reports contain a more thorough listing of each file's information including full path names.

The '**Summary**' type report shows only aggregate information such as number of files and total size of the volume.

Report Location

Browse to an existing location to save the report.

Notes

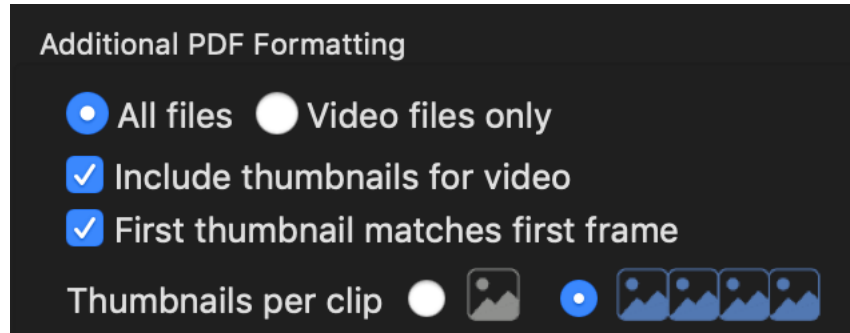

You may automatically '**Add notes to reports**'.

A screenshot of a dark-themed interface. At the top, there is a checkbox with a blue checkmark and the text 'Add notes to reports'. Below this is a white text input field with a blue border. The text inside the field is 'Data Wrangler', '1234 Main St', and 'Your Town, CA 98000' on three separate lines.

For example, this might be contact information, project details, etc. The notes will appear in each report at the bottom of summary information.

Additional PDF Formatting

TrueCheck is “video aware” and can extract file metadata and thumbnails for over 20 different camera/video formats including MOV, MXF, MTS, MPEG, AVI and more.

With PDF report type enabled, choose between including information about **'All files'** or just **'Video files only'**.

'All Files' means the report may have thumbs and metadata for video files and also textual offload information about non-video files.

Alternatively, for simplicity you may choose to report just information about **Video files only**.

Thumbnails for videos are optional. Choose one or four sampled video frames to be included. The thumbs are sampled based on percentages within the clip.

Normally the first thumb would be grabbed a few frames inside the clip to avoid potential black or useless frames. Or you can force the **First thumbnail matches first frame** for situations such as clapboards, etc.

NOTE: Image sequence files such as RAW will be treated as if they're one continuous clip and sampled accordingly.

Customize PDF Header

PDFs may include your own company logo if desired.

To replace the default application logo with yours, they must be PNG, JPG, TIF, GIF or BMP format and 128x128 pixels. Larger files will be resized appropriately. Non-square files may be cropped or stretched to fit.

MHL Verify Options

Select whether to cancel a MHL verification session when a checksum mismatch is encountered, or continue processing the volume and report errors.

Notification Preferences

TrueCheck can play a sound alert and/or a Desktop alert when an activity completes (e.g. a report has been generated and saved).

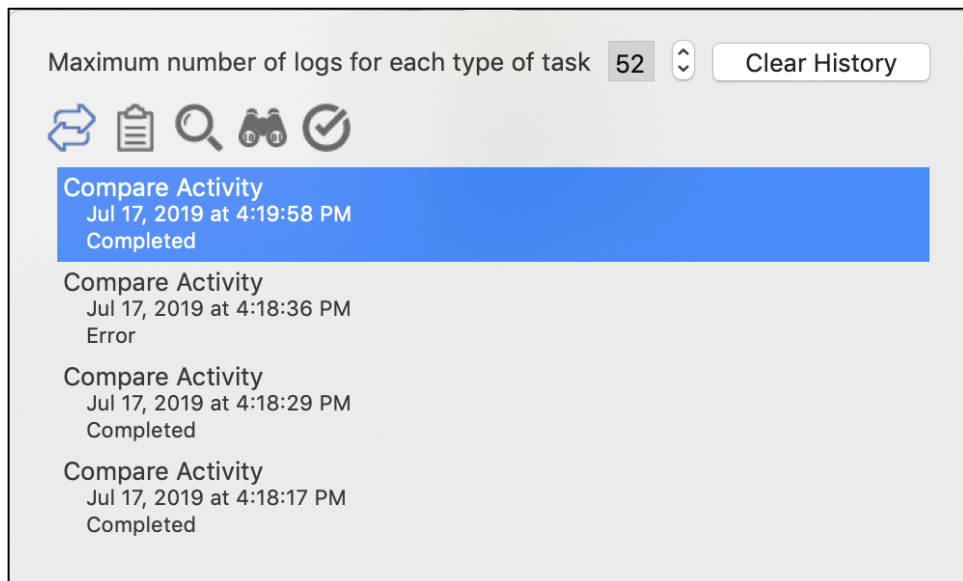

NOTE: Desktop alerts will only apply when the TrueCheck application is not the active window on the computer.

Tasks History

TrueCheck saves a history of your various activities within the application. This information is grouped by task type (Compare, Report, Search, View Checksums, and MHL verifications).

You may save up to 50 logs for each activity type. Set the maximum number of saved logs to zero if you do not want to keep any.

NOTE: 'Clear History' has no bearing upon reports that have already been saved.

The history list includes basic information about the task.

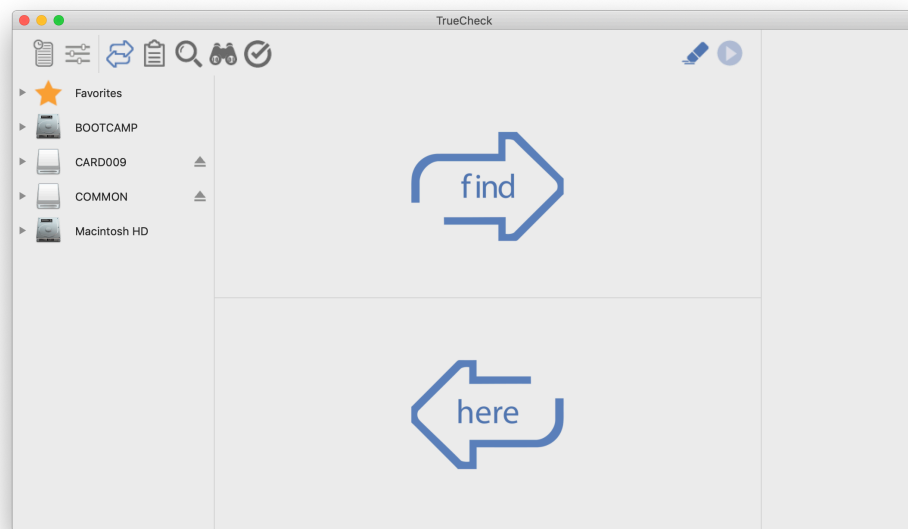

'Right-click' on the log of interest and select **'Import Selected Items'** to restore the results to the center display area of the application.

Making Comparisons

Select the '**Compare**' icon from the toolbar. Set comparison preferences for type of file and/or folder comparisons to be performed. Then drag and drop items to be compared into the '**Find**' and '**Here**' areas.

For example, to look whether a particular item exists, or its attributes match a group of files, folders or volume, place the item(s) to compare in the top area and where to look in the bottom.

To **Begin** a comparison, click the blue play type button, top right. **Clear** all items from both queues with the blue eraser button. You may also remove individual items from either queue by **right-clicking** on the item.

Comparison results are displayed in the center screen area while activity progress is reported and color-coded in the right column.

TIP: You may reload previous results by '**double-clicking**' on the status. **Right-click** for other actions such as **Clear**, **Cancel** and create **Reports**.

Comparison
Completed - Matches Found
Compare 1 folder to 1 folder
Comparison
Completed - Partial Match
Compare 1 folder to 1 folder
Comparison
Completed - Matches Found
Compare 1 folder to 1 folder

CAUTION! Comparison results are dictated by the Comparison Preferences. Choose the folder and file options carefully. Direct file comparisons are controlled by the **File Options** in **Preferences**. All other comparisons of folders of files are affected by **Folder Options** preferences only.

When looking for **'Folder Equality'** or **'Folders with Commonality'** a list of files in both volumes will show what is same and what is different.

Find	Here
/Volumes/CARD009	/Volumes/COMMON
<div>   0001XQ.MXF </div> <div>   0007U4.MXF </div> <div>   0012FN.MXF </div> <div> Size: 170.9 MB (170,920,772 bytes) Type: xxHash64 Value: fa1e57f5f2358e54 </div>	<div>   0001XQ.MXF </div> <div>   0007U4.MXF </div> <div>   0012FN.MXF </div> <div> Size: 50.3 MB (50,331,648 bytes) Type: xxHash64 Value: 37c03cb045664513 </div>

When comparing folders, matching items within are indicated by green checks. A red X indicates items that do not match the enabled criteria.

Select a file to display its details at the bottom of the list.

A yellow triangle means something about the file or folder matched one or more of the enabled criteria but not all. For example, the files below had same name, but their attributes were different and the comparison criteria was set to match BOTH Name and Size.

<div>   NEW EULA FINAL.rtf </div> <div> Size: 129 KB (129,120 bytes) Type: No checksum computed Value: No checksum computed </div>	<div>   NEW EULA FINAL.rtf </div> <div> Size: 26 KB (26,083 bytes) Type: No checksum computed Value: No checksum computed </div>
--	---

With checksum matching enabled, the same comparison shows as no match.

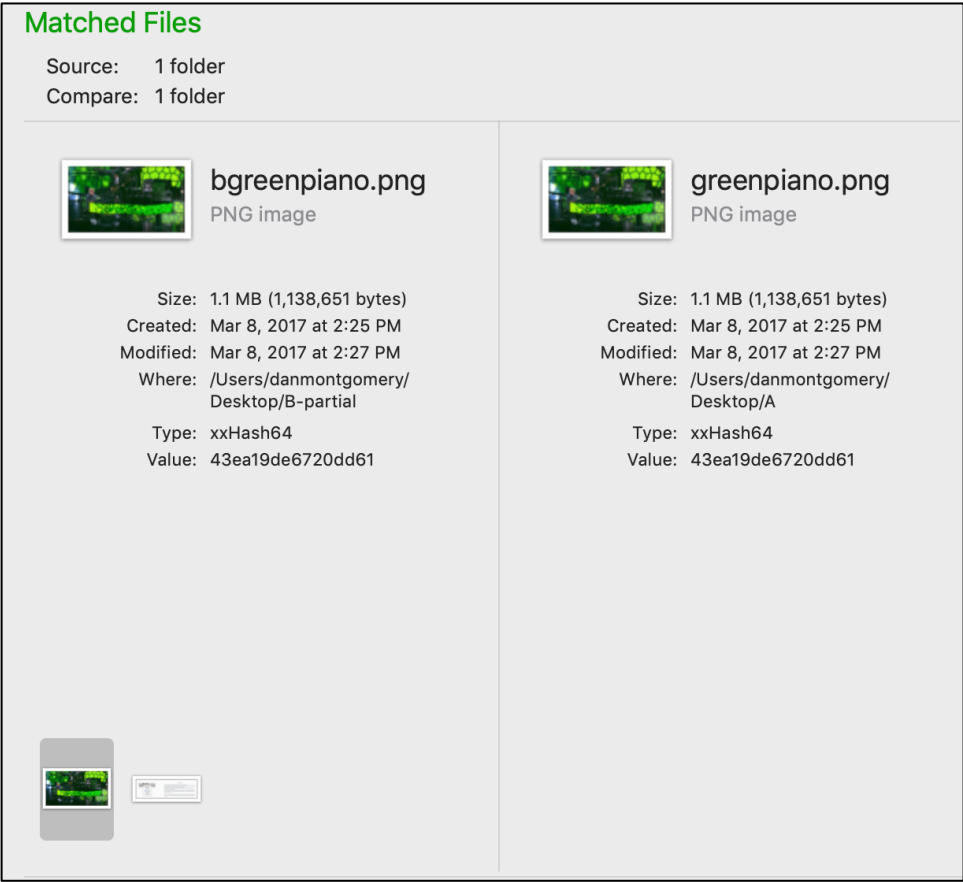

<div>   NEW EULA FINAL.rtf </div> <div> Size: 129 KB (129,120 bytes) Type: xxHash64 Value: 7f8ce7e63a32c9d0 </div>	<div>   NEW EULA FINAL.rtf </div> <div> Size: 26 KB (26,083 bytes) Type: xxHash64 Value: 7e6e9626007ad2c6 </div>
--	---

Files without matches will be shown as black text in the volume where they're contained, and grayed out in the volume from which they are missing.

Direct **File** comparisons or '**Compare folders – files**' will only bring up matches, not lists of all files. If more than one match is found you can scroll across to see details of the next.

These files matched checksums even though the names of the files were different.

Creating Reports

TrueCheck can generate an inventory report (manifest) of any file, folder or volume. Just drop in the item(s) and click Begin.

Reports will be named and formatted according to Report Preferences.

TrueCheck uses PrimeTranscoder's powerful video analysis daemon to acquire metadata information about video files.

Use the PDF format to include checksums, thumbs and other metadata such as video format, frame rate, duration, audio tracks and more. Or use Text or CSV type reports for quick summaries of a disk's contents.

TrueCheck Report

Final Status: Verified	Report Start Date: June 26, 2019 at 1:11:07 PM EDT	OS Version: 10.14.5 (Build 18F132)

File Searching

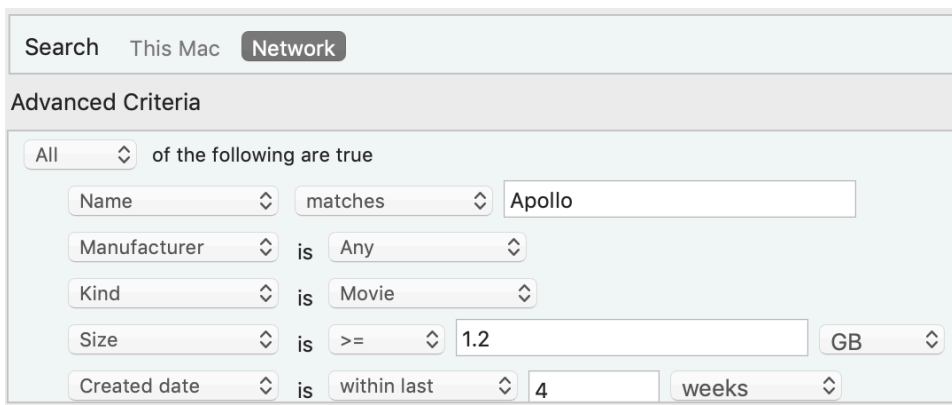

TrueCheck offers a built-in search function to locate items of interest on this Mac or across your network. You may build complex queries to help narrow results.

TIP: Right-click in the top search bar to add frequently used locations.

In addition to typical Finder level queries, you can specify to look for video centric files by manufacturer formats.

Use the plus and minus buttons on the right to add or remove criteria. Select whether Any, All or None must be true to match results. Depending upon type of criteria the action and input dialogs change to accommodate appropriate input.

Press the Begin button to start the search. Use the eraser button to clear items from the queue. **'Right-click'** on the status in the right column to **'Cancel'** active searches.

NOTE: Restarting the application clears search criteria.

Working with Checksums

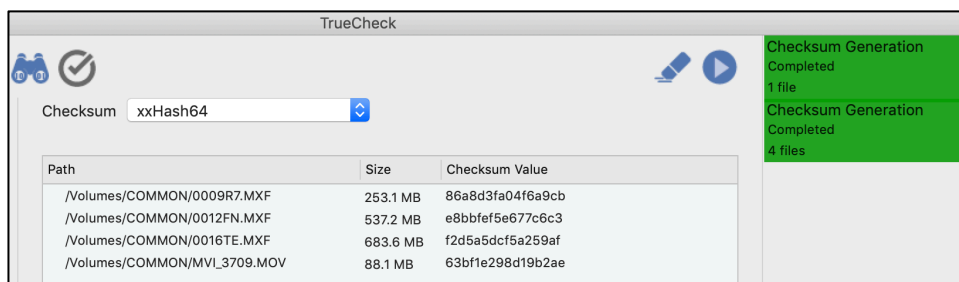

Create Checksums

Select the checksum **'View'** to calculate values for any file or group of files.

Choose the hash value format: XXHash-64, MD5 or SHA type.

Drop the file(s) into the queue and click **'Begin'** button to process. Results will be displayed with the file names, sizes and checksum values.

TIP: Right-click on the status and choose Report to save a simple CSV file of results.

	A	B	C	D	E	F
1	Path	Type	Checksum	Size	Date Created	Date Modified
2	/Volumes/COMMON/0009R7.MXF	xxHash64	86a8d3fa04f6a9cb	253059908	4/7/10	4/7/10
3	/Volumes/COMMON/0012FN.MXF	xxHash64	e8bbfef5e677c6c3	537242436	4/7/10	4/7/10
4	/Volumes/COMMON/0016TE.MXF	xxHash64	f2d5a5dcf5a259af	683582276	4/7/10	4/7/10
5	/Volumes/COMMON/MVI_3709.MOV	xxHash64	63bf1e298d19b2ae	88102173	9/18/12	1/28/13

Verify MHL or Checksum File

TrueCheck supports two different types of checksum verification files: an industry standard Media Hash List (**MHL**) type and a simple text list of files and checksums.

Test the integrity of volume's files previously sealed with a MHL or checksum text file.

Browse to a .MHL or .MD5 file. Or drag and drop the file into the text box.

TrueCheck will compare the referenced checksums against those calculated for the files within the associated volume. Successful checks will show the number of files in the volume verified and a green "completed" status.

If any errors are encountered, they will either be enumerated or the verification halted depending upon settings (see **Preferences**).

MHL files adhere to the organization's formatting and naming standards (see www.mediahashlist.org/mhl-specification). MHL lists contain relative paths to files and their original checksum values. These are always saved with output copies in the Destination location(s). MHLs are an important quality control tool for your organization's workflow to ensure files are in original pristine condition.

NOTE: Imagine Products, Inc. is a proud sponsor and contributor to the open standards for media file handling by the American Society of Cinematographers (www.theasc.com) and Society of Motion Picture & Television Engineers (www.smpte.org).

Appendix A – Installation

This section details the initial required steps before using TrueCheck. Included in this section are instructions on installing the program, system requirements and registration.

Skip this section if a registered copy of the application is already installed on your system.

Installing the Software

Download the TrueCheck installer to your computer and double click to run. You may be asked for the administration password for the computer.

Place the TrueCheck application into the '**Applications**' folder (or wherever you wish to install it).

You may be asked for the administration password for the computer.

The application will periodically check for newer versions, but you can manually check at any time by clicking the '**Check for Updates**' link under the '**Help**' menu.

System Requirements

The recommended **Macintosh** configuration:

- Mac OS X 10.14 -- 10.11
- 4 GB RAM
- 16 GB free disk space

Activation

TrueCheck activation requires web access to our server to register the software for use. When you purchased the application, a TrueCheck seat was added to your account on our website. Upon first launch, the software will attempt to connect to our server and prompt for you to activate.

TIP: Activation information is stored on the system level independent of user preferences, so multiple profiles on the same computer may access the application as long as you install under the **ADMIN** user profile for your computer.

Just enter your account email and password for fast, easy activation, or enter the individual serial number.

If you don't have an Internet connection on the target computer perform a manual activation. You may use a QR code reader app on your smart phone to quickly go to the appropriate page on our activation site to receive the manual activation code, or use the link provided to type in the computer ID.

TrueCheck is a single user license. If you're upgrading to a new computer, or need to transfer the software, be sure to '**Deactivate**' from the '**Application menu**', just above '**Quit**'.

How to Register

If you've purchased from our webstore, you're already registered in our system. If you purchased from a reseller or other method, the reseller or Imagine can transfer ownership to you. You must have an account on our website to run the software and receive customer support.

Upgrades are released from time to time and the only way you'll get these is to be registered.

We may also send you periodic electronic news. Generally we only notify of new products and trade shows, commentary and stories of interest from other users just like you. Let us know what you're up to (publishing your stories is an inexpensive way to network within the production community).

Follow us on Social Media for timely and helpful information.
On Twitter: @imagineproducts

Appendix B - Trouble Shooting

Throughout the program, reminders and error checks help to anticipate trouble spots in the program while preventing inadvertent data loss. If a message appears that is unclear, check the Help topics or refer to the appropriate section of this guide for further explanation.

Frequently Asked Questions

I Can't Activate!

Automatic TrueCheck activation requires web access to our server to register the software for use. When you purchased the application, a S TrueCheck seat was added to your account on our website. Upon first launch, the software will attempt to connect to our server and prompt to activate.

Use your email and account password, or the assigned serial number to activate. If you don't have an Internet connection on the target computer perform a manual activation. You may use a QR code reader app on your smart phone to quickly go to the appropriate page on our activation site to receive the manual activation code, or use the link provided to type in the computer ID.

TrueCheck is a single user license. If you're upgrading to a new computer, or need to transfer the software, be sure to '**Deactivate**' from the '**Application menu**' just above '**Quit**'.

When transferring or moving the software, always download the most recent version of the software onto the new computer and activate it normally.

The software asks for activation each time it's launched. Check your Gatekeeper selections (Computer Settings/Security) to allow full installation of the software. You may need Administrative privileges to allow activation information to be saved for your profile.

Technical Support

This product was designed to be easy to use and we want you to feel at home as you navigate through it. This guide should address the most often asked questions along the way. However, should you need support the specialists at Imagine can provide answers quickly and in terminology that you can understand.

Contacting Imagine Products

Visit Imagine's Web site to fill out a problem report <http://www.imagineproducts.com/> for fast, free service.

Updated news and patches will be available on the page, as well as Frequently Asked Questions under the Support tab on our site.

Alternatively you may email support @ imagineproducts.com

Check for Updates

From the application's menu, select '**Check For Updates**' to manually check now for any updates, or to configure how often the application should check automatically whether a newer version of the software exists.

Diagnostic Logs

Should you experience crashes or other system problems you may be asked to supply us with the '**Diagnostic logs**'. You'll find them here, under the '**Help**' menu.
