

Welcome to UniteCast Studio Version 4.2.1 **For Expression Encoder 4 Service Pack 2**

Please note: Expression Encoder Service Pack 2 MUST be installed prior to installing UniteCast Studio.

1.0 Introduction

Please note that UniteCast Studio requires the installation of Expression Encoder 4 SP2.

Please email bugs (include circumstances and error codes) to support@unitecast.com. Also please send me compatible /incompatible capture hardware details.

2.0 New Features for 4.2.1

- Added support for [Expression Encoder 4 SP2](#). This version is now required to run UniteCast Studio.
- The user editable VIDEO-Custom-Preset-1.xml file provides multi-bitrate encoding. This file can be edited to fit your streaming data rates as required.
- Added an HTML5 viewer option to the Viewer panel.
- Significantly improved "slide jumping" accuracy in the Silverlight player.
- Minor bug fixes and tweaks.

3.0 Known Issues

Installation of UniteCast Studio requires Microsoft Expression Encoder 4 (Service Pack2). The "Demo" version works fine. However, Expression Encoder Pro will provide greatly improved H.264 (Flash) encoding.

When using the VDesktop profile it is NOT possible to specify the audio source as a DV or HDMI (i.e. Black Magic) device. There is a "work around" for this, please see the VDEKSTOP instruction in the help file.
